

Dal 1956

ENTHUSIASM, CREATIVITY, JOY

We enthusiastically welcome the challenge of global competition as we can rely on the certainty of our know-how and on the power of OTLAV automation.

Now inventing, creating, producing and selling are the joyful principles that stem from our new powerful position.

Fabio Padovan

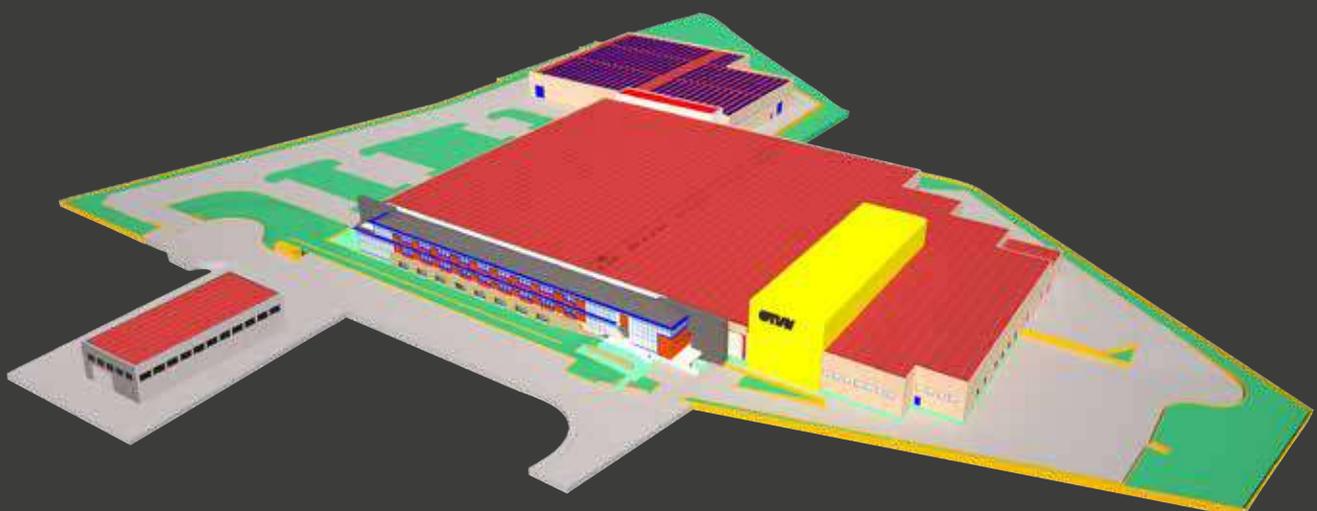

OTLAV S.p.A produces and sells hinges for doors and windows and other accessories for frames. **Founded in 1956 by entrepreneur Angelo Padovan, Otlav has produced more than 2,2 billion of hinges since 1956.**

With more than 100 registered patents, Otlav ensures high quality standards and **is present with its wide range of products in over 80 countries worldwide.**

In 2007 the current production site was inaugurated in Santa Lucia di Piave, built with excellent technologies and cutting-edge operational tools. It's a jewel of automation and allows to reduce the management and production costs, reason why it is frequently visited by technicians from all over the world.

Basing on these investments Otlav has intensified its two main features:

- Continued investment in cutting-edge technology and production machinery.
- Complete autonomy and self-responsibility in the whole production chain, which is property of Otlav.

For the transportation of all necessary material, "OAMH" makes use of special automatic trolleys designed and built specifically for OTLAV, called **LGV (Laser Guided Vehicle)**. These trolleys transport and distribute the necessary materials to individual machinery for seamless working in a completely automatic way. Speed, safety and precision.

"OAMH" "Otlav Automatic Material Handling" is a project developed after five years of research and studies all around the world; a technological jewel created by designing at first the best logistical location, and then a subsequent lay out, and eventually the container to cover these structures: an unmistakable technological masterpiece, which is 20 meters high.

Rationalization of space, optimization of logistics and exploitation of integrated automation: all of these account for respectively the flow or transportation of materials and the streaming of information.

The goal is to cut costs by rendering the hinges increasingly competitive with an unparalleled level of quality.

The means through which this goal is achieved is by the implementation of a complex automated system from the instant when the raw material enters the factory to the exit of the finished product, without any sort of interference from the outside.

In 2021, due to the continuous increase in demand and the need to store large quantities of raw materials, a building next to the production site was purchased; expansion works have also begun and will end in 2023.

(In the photo the expansion works -19 October 2022)

CATALOGUE

We have compiled this list in order to help our customers as much as possible when they are making out their orders, to eliminate the possibility of mistakes and subsequently, to shorten the delivery times of our products.

The codes of all the articles available in the OTLAV warehouse are listed clearly and precisely and each code refers to a single article.

For example, there is a code for the complete hinge (code CI), the male part (code CG) and the female part (code CF), or the hinge cap (code GC). In each case, the product is described in detail, with code, type, finishing, packaging and price.

The price is given in Euros and the price in bold type is the sum of the prices that make up a hinge, i.e. the price of the male part (code CG) plus the price of the female part (code CF), or the price of a complete hinge (code CI). Important: We recommend you to pay the utmost attention when using this List, especially in the initial stages, because **ONLY COMPLETE, EXACT CODES ARE CONSIDERED VALID**, in order to avoid regrettable hitches.

This price list can undergo products and prices modifications without notice, for updating refer exclusively to the online price list published on website www.otlav.com.

Further information regarding OTLAV products, such as quality reports, tests and others, is available on the website: www.otlav.com.

CODE STRUCTURE

AA BBB CCC DD EE

The ordering code has been prepared using the following method:

AA = GROUP

- AI = door alignment device,
- CE = bush,
- CF = female part,
- CG = male part,
- CI = complete hinge,
- CR = pintle,
- FP = pivot,
- GC = cap,
- IN = concealed hinge,
- JC JR = fixing plate,
- LC = flushbolts,
- MA = complete tools box,
- MC = jig,
- NP = plate,
- NT = bolt hinge,
- RO = washer,
- TE = head,
- TO = hole cover,
- TP = door closer.

BBB = MODEL

CCC = DIAMETER or REFERENCE SIZE (hinges = diameter; bolts = length). For tools, it indicates the diameter of the article for which they have been made. It is specified in teens of millimeter: for example $\emptyset 13 = 130$.

DD = SURFACE FINISHING of the particular product.

EE = PROCEEDING NUMBER which identify the article.

NB: OTLAV may not be held responsible for any errors that occur due to an incomplete, absent or incorrect article code during the dispatching of orders.

OTLAV TESTS

Hinge carrying capacity

As required by European regulations and by Regulation (EU) No. 305/2011 **all OTLAV hinges are subjected to stringent resistance tests to check performance both during the design phase and regularly during manufacturing.**

The I.U.S. (Intensive Use Simulator) is the testing system used in the OTLAV Test Laboratories.

It consists of a rigid structure made up of uprights and crosspieces to which the door or window being tested is fixed and by integrated automated systems that simulate the movement of the door/window during normal use. The special configuration of the I.U.S. faithfully reproduces the fixing of the door/window to the support it is intended for. It is also able to recreate extreme situations helping to considerably increase safety margins.

The hinges are subjected to different types of tests as envisaged by the harmonized standard UNI EN 1935/2004 and by standard 14648/2008:

- Test for resistance to wear.
- Test for loading and overloading.
- Test for resistance to extraction (of the pin from the support to which it has been fixed).
- Test for resistance to torsion.
- Test for resistance to bending.
- Test for resistance to mishandling such as breaking down the door (British Standard Institute, PAS 23/1,1999) and RAL tests.

A number of digital and analogue measuring instruments assembled on the I.U.S and connected to computerized data capturing devices, measure in real time the following significant values during the tests: deformation, movements, load capacity variations, number of cycles.

Constant visual and acoustic checks are also carried out to detect any anomalies not registered by the instruments, for example such as powder due to mechanical wear or creaking. The I.U.S. can test windows or doors up to 250x150 cm and weighing more than 250 Kg.

EC Certificates and Performance Declarations

Tests on the hinges are also carried out at external bodies able to certify that the company manufactures according to rigid, systematically monitored production plans and that the products pass the tests envisaged by the standard UNI EN 1935:2004 they are thereby able to issue, if needed, the EC certificate or certify the data provided by OTLAV in the "performance declarations".

trasferimento tecnologico e innovazione

OTLAV TESTS

Hinge carrying capacity

More than 65 years of technical experience in door and window hinges is a remarkable achievement, but the day-to-day challenge is the constant search for new findings demonstrating improvements in performance, safety and appearance.

Resistance, carrying capacity and reliability contained in a harmonious design, even if concealed, are the achievements reached and maintained over time by all the OTLAV models.

The hinge, initially comprised of a body and a threaded pin welded together to form the male and female parts, has been improved over time through different models with plates, pins and screws leading to **highly sophisticated models adjustable on 3 axes**.

Now thanks to constant research and checks over manufacturing, **we have developed hinges which can support more than the maximum capacity indicated by the Standard UNI EN 1935:2002:**

- 200,000 cycles (opening and closing);
- door mass of 160 kg;
- overload stress for safety levels up to 480 kg. on door systems.

When a hinge offers enormous potential, the choice of the model and number of hinges used must be evaluated considering other factors which improve conditions of use in addition to the indications in the Standard UNI EN 1935:2002 which suggests a minimum of 3 hinges for each door based on its mass.

The dimensions of the door/window, material used, thickness and anchorage points subject to requirements are all exclusive choices of our customers based on their experience. The performance levels declared by OTLAV provide good information to identify the hinges based on both the conditions of use and of the location of the door/window (public or private places, schools or offices, hotels or homes etc.) and the levels of care during use.

The load capacity of the hinges is declared by OTLAV on the basis of the tests necessary to obtain CE certification (UNI EN 1935: 2002 standard for single-axis hinges, European Assessment Document EAD-020001-01-0405 for multi-axis hinges), if Otlav declares more than 160 kg. (the maximum required by law), the declaration is made on the basis of the durability test of 200,000 cycles

i NOTE

The weight of the door/window which can be supported by a hinge depends on many factors:

1. dimensions of the shutter;
2. number of hinges;
3. positioning of the hinges;
4. type and quality of material used for the door/window;
5. accuracy, precision and experience when mounting the door/window to ensure the hinges are perfectly aligned;
6. distance of the male part from the frame must not be more than 6 mm;
7. thickness of the door/window material at the anchorage point.

Our technicians are available for support and any clarification required.

LOAD CAPACITY TABLE

Hinges for doors up to 80 kg. - door mass class 4

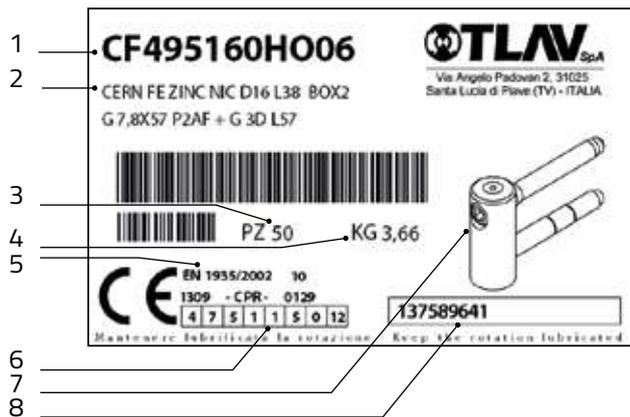

Door height mm.	400	600	800	900	1000	1050	1100	1150	1200	1250	1300
2400	4	4	4	4	5	5	5	5	5	3	3
2300	3	3	3	4	4	5	5	5	3	3	3
2200	3	3	3	3	4	4	4	3	3	3	3
2100	3	3	3	3	3	4	3	3	3	3	3
2000	3	3	3	3	3	3	3	3	3	3	3
1900	3	3	3	3	3	3	3	3	3	3	3
1800	3	3	3	3	3	3	3	3	3	3	3
1200	3	3	3	3	3	3	3	3	3	3	3
800	3	3	3	3	3	3	3	3	3	3	3
400	3	3	3	3	3	3	3	3	3	3	3

- X Suggested number of hinges
- 3 Switch to a hinge of one higher class, use 3 hinges.
- 3 Switch to a hinge of two higher class, use 3 hinges.

Tables showing the number of hinges to use depending on the hinge model, the width and height of the door/window, can be accessed in our website: www.otlav.com

OTLAV TESTS

How to read the labels

Example of a label placed on a box of Otlav products.

- 1) Product code.
- 2) Product description.
- 3) Number of pieces contained in the box.
- 4) Weight of box.
- 5) References to standards, accredited institution and EC certificate number.

6) 8-digit coding system on performance.

- 7) Concise drawing of the product.
- 8) Manufacturing batch

To aid understanding of the performance requirements shown in the labels on Otlav products, as per Standard UNI EN 1935:2002, we have provided below a summary of the evaluation criteria shown in the 8-digit coding system (see point 6 of the label above):

4	7	5	1	1	5	0	12
digit 1	digit 2	digit 3	digit 4	digit 5	digit 6	digit 7	digit 8

Digit 1 – Category of use.

- *Grade 1 - light use:* hinges used on doors or windows in homes or in other residential areas and in buildings where there is a low frequency of use by people highly incentivized to take care and with a low probability of accidents or incorrect use.
- *Grade 2 - medium use:* hinges used on doors in homes or in other residential areas and other buildings where there is an average frequency of use by people fairly incentivized to take care and with a slight probability of accidents or incorrect use.
- *Grade 3 - heavy use:* hinges used on doors in buildings where there is a high frequency of use by the public or by other people with little incentive to take care and with a high probability of accidents or incorrect use.
- *Grade 4 - severe use* (digit 8: grades 12, 13 and 14): hinges used on doors subjected to frequent and violent use.

Testing methods.

The tests to evaluate the required performance levels have been carried out on two hinges fixed to rigid testing equipment or a single hinge subjected to vertical load testing.

Digit 2 - Durability.

- Grade 3 = 10,000 cycles
- Grade 4 = 25,000 cycles
- Grade 7 = 200,000 cycles

The hinged item is rotated, simulating opening and closing of the door by 90 degrees for the number of cycles required by the grade being tested. Via this test, it is verified that by the end of the test, the wear of the hinge does not damage the functionality of the hinge.

At the end of the test, the vertical and horizontal deviations of the door must remain within the required limits.

Digit 3 - Door mass.

It's the weight of the door on which the hinge to be tested is mounted.

- Grade 0: 10 kg
- Grade 1: 20 kg
- Grade 2: 40 kg
- Grade 3: 60 kg
- Grade 4: 80 kg
- Grade 5: 100 kg
- Grade 6: 120 kg
- Grade 7: 160 kg

Digit 4 - Suitability for use on fire rated or smoke rated doors.

- Grade 0: no.
- Grade 1: yes.

The door is tested to determine if the material is able to endure fire (see Appendix B of Standard EN 1935:2002 for the additional requirements).

Digit 5 - Safety.

Grade 1: the hinge satisfies the essential requirements of safety in use.

Load deformation test: a load equal to the door mass is applied: the deformations recorded during and after the load must remain within certain specified limits and there must be no change in the functional performance. Incorrect use of a door over a short time period is reproduced via this test.

Overload test: a load twice the door mass being tested is applied: the hinges and the door must not present any deformation or breakage and the door must not drop even if the hinge no longer works. An exceptionally negative event is reproduced via this test.

Shear load test: this test is carried out separately on a three pins hinge (not mounted on a door). The central part of the hinge (bushing) is loaded with a predetermined weight as per a table. This test is made to verify that the central pin does not sustain any deformations which can damage the functionality of the hinge.

Digit 6 - Corrosion resistance.

The level of corrosion resistance is defined via a salt spray test according to Standard ISO 9227 and evaluated according to Standard EN 1670. The Salt Spray test is carried out on samples corroded by a saline solution in a special test cabinet. The time necessary for the onset of oxidation establishes the grade of resistance from 0 to 5.

See following pages.

Digit 7 - Resistance to burglary.

- Grade 0: No.
- Grade 1: Yes. Hinges are suitable for use on doors requiring a degree of security.

Digit 8 - Hinge grade.

Overall rating for the hinge (in ascending order from 1 to 14).

OTLAV TESTS

Resistance of finishing

Formation of rust on steel is a natural and inevitable chemical phenomenon which occurs regardless of the location and the conditions. The longer the start is delayed, the more the functionality and appearance of the door/window is guaranteed. The propensity of steel to corrode can be reduced by adopting measures to protect it, based on external coatings or finishing which tend to isolate it from aggressive atmospheric conditions. Correct use of a hinge must therefore take into account the location in which it will be used and resistance of the finishing to rusting. When using hinges in a protected environment or in mild and stable environmental conditions it is possible to choose from a wide range of finishing. When using hinges in an aggressive environment we recommend choosing from those with corrosion resistant finishing used together with OTLAV caps.

At Myrtus, the galvanic treatment company of OTLAV Group, all the finishes are subjected to a specific resistance test.

The salt spray test, carried out according to the UNI regulations detailed below, is an accelerated corrosion test which enables the resistance to corrosion of a material or a coating to be evaluated qualitatively. The sample to be examined is placed inside a test chamber at a constant temperature, humidity and pressure: inside the chamber a saline solution is atomized which then attacks the protective coating of the hinge. At predetermined intervals the samples are observed and any changes are registered up until the appearance of traces of oxidation or spots of red rust.

There is no direct relation between the resistance to salt spray and the life of hinges exposed to atmospheric agents in different environments: therefore this test must be considered as a comparative or indicative method of relative quality (not an absolute figure).

OTLAV is also environmental friendly oriented having the **"Infinitely Recyclable" certification (Myrtus was the first company in Italy to obtain the certification)**, which acknowledges metal products which can be smelted and recreated an infinite number of times, without giving rise to waste products or other harmful elements for the ecosystem.

Salt spray chamber:

Angelantoni ACS mod. DCTC600

Test carried out according to regulations:

UNI-ISO 9227 type NSS SS DIN 50021 ASTM B 117 SIS 184190 NFX 41-002

Salt concentration:

5% +/- 0,5%

Collected volume:

1,5 cc hour - Mass 1033 Kg/m³ - pH 6,9

Chamber temperature:

35 °C +/- 1 °C

Pressure:

1,5 bar

Samples are arranged in a radial pattern on the test specimen holder

Salt spray chamber: Angelantoni ACS mod. DCTC600.

i NOTE!

Especially hostile areas and agents and inappropriate conduct can accelerate the decline of steel even if treated:

- 1) salts or acids and other oxidizing agents present in the air and especially concentrated in marine areas, in livestock shelters and in urban areas are aggressive factors;
- 2) the same degree of corrosion can be found in rooms or work sites poorly ventilated, in which chemical treatments such as painting or finishing of floors have been carried out;
- 3) high humidity and repeated temperature changes typical of rooms or places not lived in are a certain cause of the onset of oxidation;
- 4) incorrect storage, handling without care or cleaning of the product with corrosive or abrasive products can damage the aesthetic and structural integrity of the product even before mounting it.

FINISHING

Finishing Description CLASS*

Finishing with high resistance to corrosion (class 5)

H0	Zinc Nickel 7 µ	5	IM	Matt Stainless Steel	5

* Resistance class

The destined use indicated in the table refers to the grade of resistance to corrosion in salt spray (NSS type) as envisaged by standard UNI EN 1670 2007 (sixth figure according to UNI EN 1935).

Resistance class	Description	Life
0	Resistance to corrosion not defined.	<24h
1	Low resistance to corrosion, use in internal dry environments (i.e. internal doors to living areas).	24h
2	Moderate resistance to corrosion, use in internal areas that may have humidity (i.e. internal doors in basements or bathrooms).	48h
3	High resistance to corrosion, use in external protected areas (i.e. protected main external doors).	96h
4	Very high resistance to corrosion, use in external areas (i.e. unprotected main external doors).	240h
5	Exceptional resistance to corrosion, use in external areas with corrosive environmental conditions (i.e. external doors/windows in maritime areas or livestock shelters).	>480h

Definition

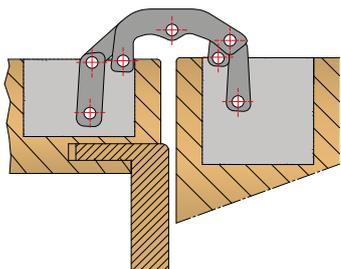

DIN right and DIN left

A hinge is **DIN right** when pulling the door, it is placed on the right side and **DIN left** when pulling the door it is placed on the left side of the door.

INVISACTA

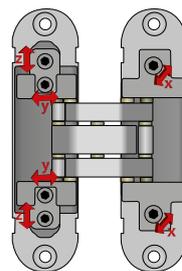

HINGES FOR FLUSH DOOR

7 JUNCTION FULCRUMS

No sliding wear

7 fulcrum points allow little friction, good flow, solidity and high loading capacity; no contact between the different bearing units thanks to nylon bushes with high friction resistance.

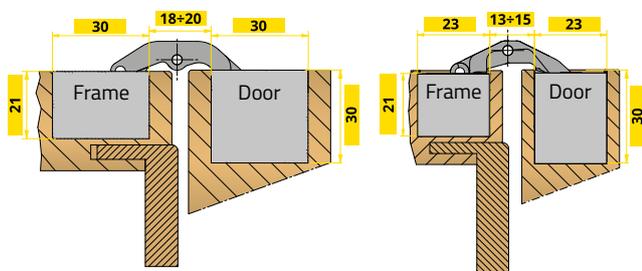

3 ADJUSTMENTS

With only one hex spanner

The clamping screws, placed in the outer casings, are not used for hinge adjustment, therefore they remain stable for a long time.

IN570, IN310, IN303, IN300, IN305, IN230 and IN235 models

MINIMAL DIMENSIONS

Slot on frame side: 21 mm

A 21 mm depth slot on the frame side makes it unique and enables its perfect integration in reduced spaces. No need to cut the architrave which can be flush mounted.

IN303, IN300, IN305, IN301, IN230 and IN235 models

REVERSIBILITY

Invisacta hinges are all reversible

The hinge if mounted in the center of the door thickness*, allows the reversibility of the door, thus enabling the optimization of the stock and logistics at installation.

* IN570, IN303, IN300 and IN305 models

COMPATIBILITY

Same milling, different hinges.

IN230
Doors up to 60 kg.

ROLLACTA R3

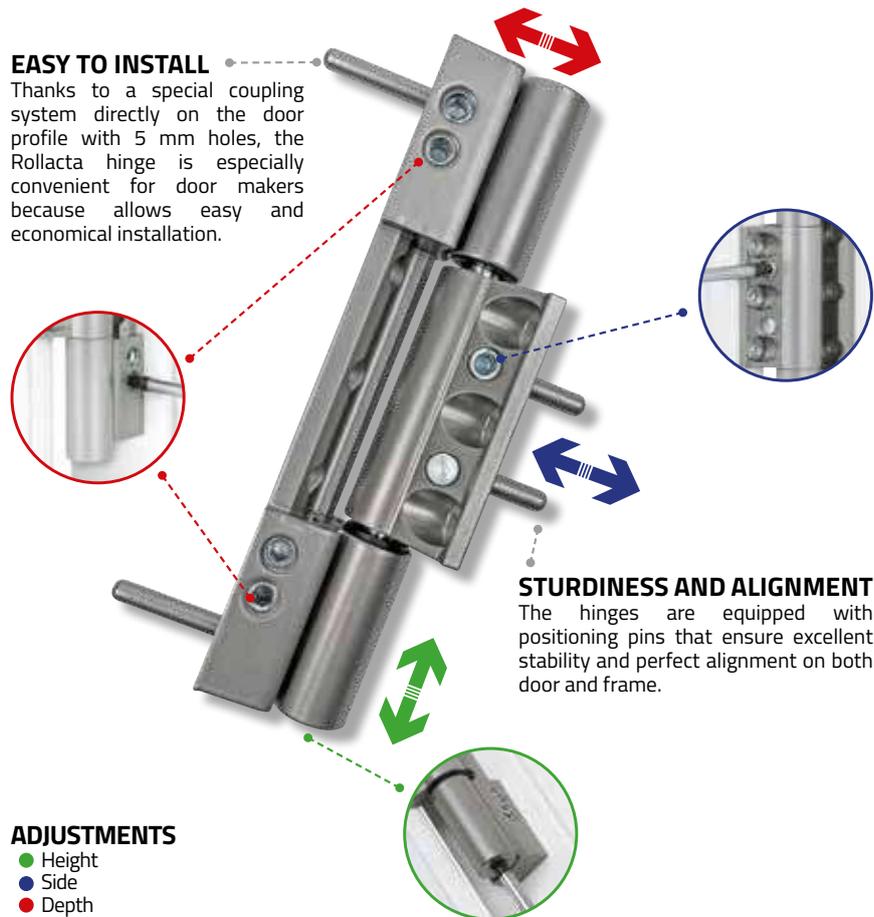

Designed to fulfill modern design needs and high quality manufacturing standards, Rollacta is the ideal solution for uPVC doors.

The special cylindrical shape blends seamlessly with sash and frame for elegant door design solution and always leaves the seal unscathed ensuring high thermal and acoustic insulation values.

EASY TO INSTALL

Thanks to a special coupling system directly on the door profile with 5 mm holes, the Rollacta hinge is especially convenient for door makers because allows easy and economical installation.

STURDINESS AND ALIGNMENT

The hinges are equipped with positioning pins that ensure excellent stability and perfect alignment on both door and frame.

SELF-CLOSING

Developed to combine perfectly with the technology of the Exacta hinge, this hinge ensures that the door on which it is mounted closes automatically. The force of the closure can be easily adjusted and it is a particularly advantageous solution for large scale applications.

For doors weighing up to 40 Kg, the fitting of a traditional EXACTA hinge in the middle and two 488 SELF-CLOSING hinges at the ends of the door is recommended; whereas for doors weighing between 40 and 60 Kg. it is advisable to fit two traditional EXACTA hinges at the ends of the door and two 488 SELF-CLOSING hinges in the middle.

ADJUSTMENTS

- Side
- Depth
- Force of closing

1. By acting on the threaded pin it is possible to quickly fit the hinge using the appropriate hexagonal bit for electrical drill screws and then make the side precision adjustment using the special "T" wrench.

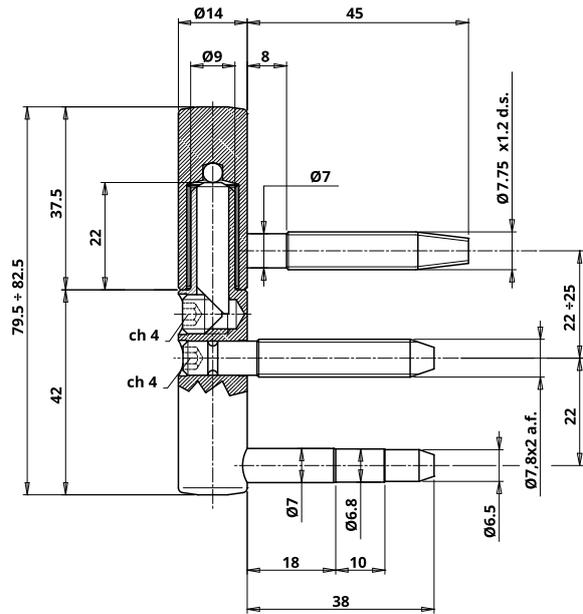

2/3. The force of the automatic closing, which also depends on the weight and size of the door, can easily be adjusted by varying the position of the special adjusting screw. This operation is clearly illustrated in the mounting diagram supplied with the hinges.

EXACTA

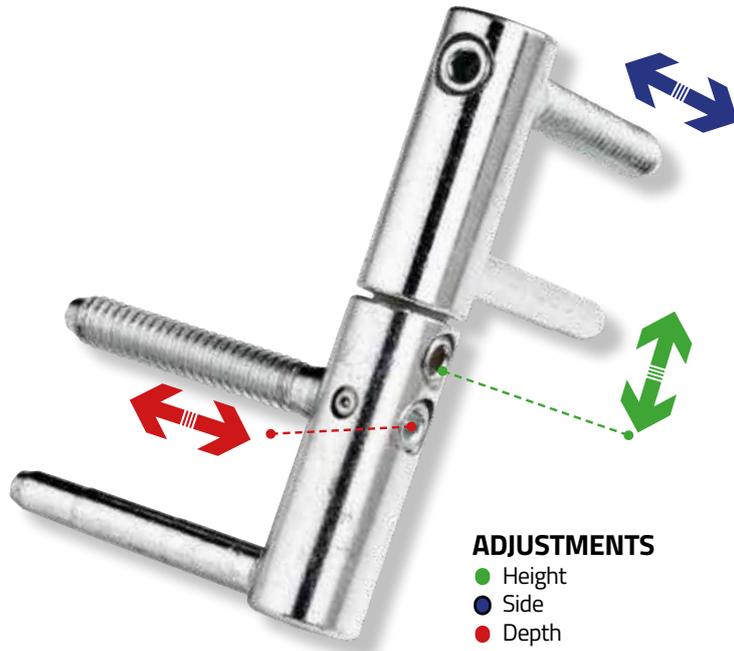

Designed to combine the perfection of three-dimensional fixture adjustment with an easy and, above all, reliable system, Exacta epitomizes the essence of OTLAV functionality.

The practical aspects of Exacta are built into each component of the hinge.

Every part that makes up this sophisticated adjustment system has been meticulously designed and only the best materials are used after having passed strict inspection tests.

A wide range of brass, steel and ABS caps means that doors and windows can now be given a personal touch of style.

Exacta's precision, reliability and practicality are all concepts that perfectly reflect the OTLAV style, which has always been geared towards continually advancing its product technology.

ADJUSTMENTS

- Height
- Side
- Depth

By acting on the threaded pin it is possible to quickly fit the hinge using the appropriate hexagonal bit for electrical drill screws and then make the side precision adjustment using the special "T" wrench.

The wide, self-threading pitch not only means that assembling time is greatly reduced.

By using a "T" wrench it is possible to adjust the height of the pivot, therefore raising the female part. The weight of the door is evenly distributed over all the door-frame hinges thanks to the great sensitivity of the height adjusting device.

ADJUSTABLE

URSUS

495 Ursus Adjustable hinge specific for massive, therefore heavy doors with particularly wide shutters.

Perfect alignment of the hinge, thanks to the three pins on the male part, that maintain in time the original vertical order of the hinge.

495 Ursus with 5 pins is available in diameter 14, 16 and 18 mm. Ursus hinge $\varnothing 14$, which can be used with the female part Exacta 495 $\varnothing 14$, is normally available in the 6 pins version (3 pins on the female and 3 on the male part). Ursus $\varnothing 16$ and $\varnothing 18$ are available, on demand, also in the 6 pins version.

SALVADITA

It is a patented safety device.

It provides protection against violent closing of doors which can cause serious damages and impairments. Situations that can be particularly dangerous when children are involved with their fragile hands. When a door is slammed SALVADITA system intervenes and blocks the door just before it completely closes. In fact **the system is activated only when a door is closed so violently that it can cause physical damage to a hand which remains trapped between the door and door frame.** If, on the contrary, the door moves at an ordinary speed, the SalvaDita device returns in its seat and it allows the door to close normally.

Otlav SalvaDita has been subjected to very comprehensive tests for durability and reliability (IHD Institute for Wood Technology Dresden).

DOORS ALWAYS SAFE EVERYWHERE

Schools, nursery schools, homes. These are all places where we live and where accidents are lying in wait. Places where a door may become a cause of injuries.

The Royal Society for the Prevention of Accidents (RoSPA) reported that in UK every year 30,000 children trap their fingers in doors, with more than 1,500 of these needing surgery and one in six resulting in amputation.

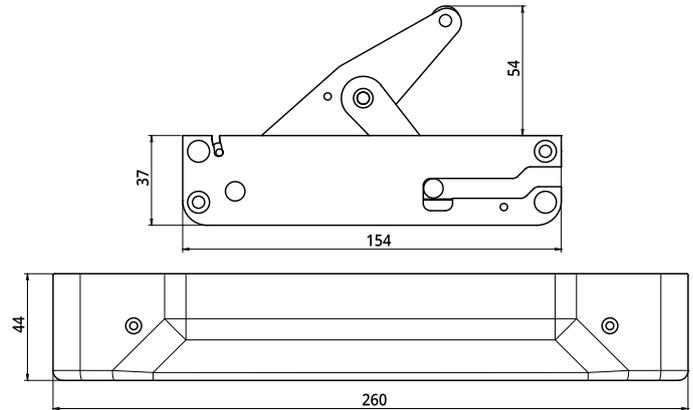

In Germany, the National Fund for Accidents, in accordance with the regulation on safety and health protection in nursery schools (GUV-SI 8045, München 2004) **estimated that about 5.7% of the injuries in kindergartens concern the crushing of the fingers in the doors,** not a negligible percentage, given the severity of the consequences, even chronic, that accidents of this kind may have.

Otlav has developed the SalvaDita system, a protection for fingers. It is an ingenious solution which allows us to live in peace within our surroundings.

When a door is slammed the SalvaDita system intervenes and blocks the door closing.

No more injured fingers.

MODULAR ROD

ACCURACY, SPEED AND FLEXIBILITY

Unlike the standard hinge drilling systems, with MODULAR ROD, thanks to the device which can lodge two or three special tools that permit the separate door and frame drilling for the subsequent hinge fitting, it is not necessary to place the door on the frame; so that it **is possible to prepare two separate lines to produce the doors, that is to say one for producing the shutters and one for the frames.**

The special symmetric shape of the jig and the reversible

stop ensure the same rod can be used both **for doors and frames whether left or right.**

The use of the shims finally permits to adapt the jigs in case it would be necessary to increase or decrease the drilling distances respect to door or frame.

The **MODULAR** rod jigs are customized according to the kind of frame, to the type of hinge, to the position and angle of the pins as to the door or frame.

1 - The modular construction permits to use the same jigs, by replacing only the blocks, to fix different kinds of Otlav hinges.

2 - The millimetric rod allows the correct positioning of the jigs on the frames and on the doors.

3 - Duly adjusted, the reversible stop permits to position the rod always with a micrometric precision, in different times both on the frames and on the doors.

4 - The first, easy action to drill the frame, is the correct reversible stop Positioning on the frame reference.

5 - Successively proceed by drilling the frame.

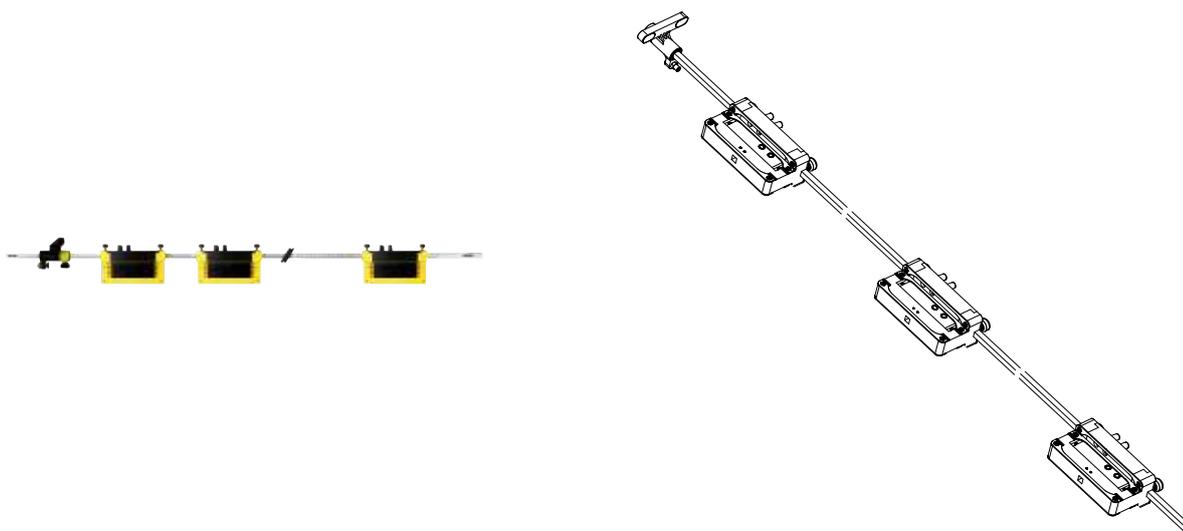

6 - As for the door the process is the same, the correct reversible stop Positioning on the door reference, is the first operation to be done while drilling.

7 - It is then easy to proceed by fitting both the male and the female parts.

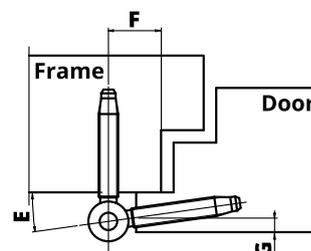

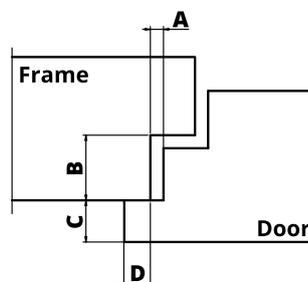

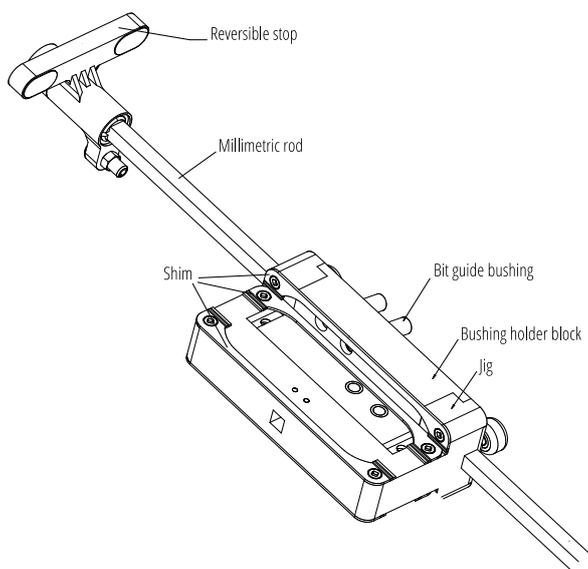

CODE	Pcs / Box	PRICE PCS.
MU8 --- Customized jig for installation of OTLAV hinges equipped with: millimeter rod, reversible stop, 3 drilling jigs and if needed shims.	1	On request

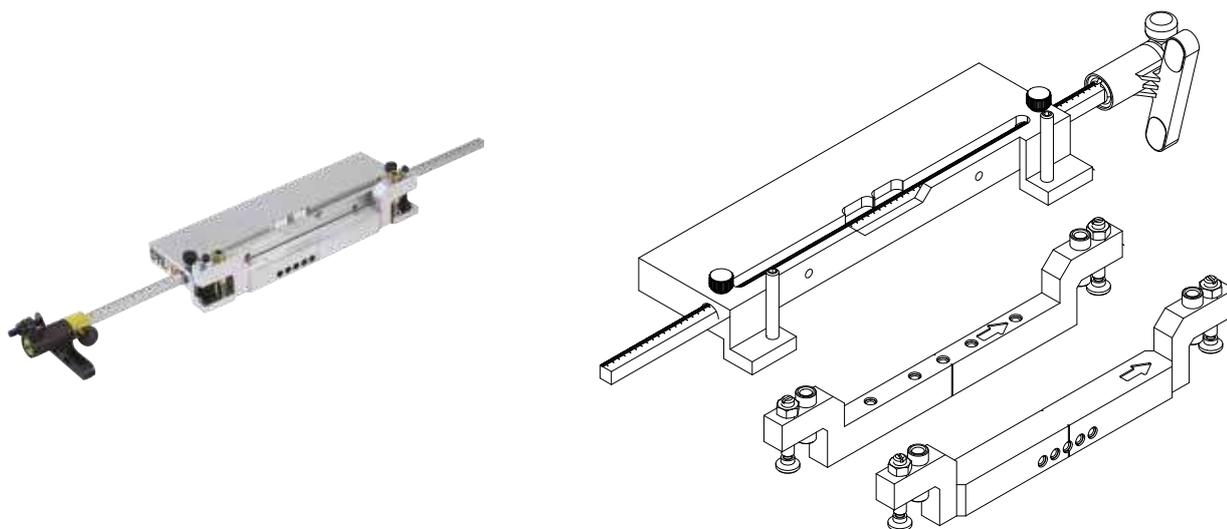

For inquiries you are requested to forward the dimensioned technical drawing of shutter and frame as per sketch here below.

- A:** Light between frame and door.
- B:** First interior frame rabbet.
- C:** Overlapping shim between door and frame.
- D:** Overlapping between door and frame.
- E:** Drilling angle for female pin.
- F:** Axis position male hinge referred to rabbet.
- G:** Axis position female hinge referred to door surface.

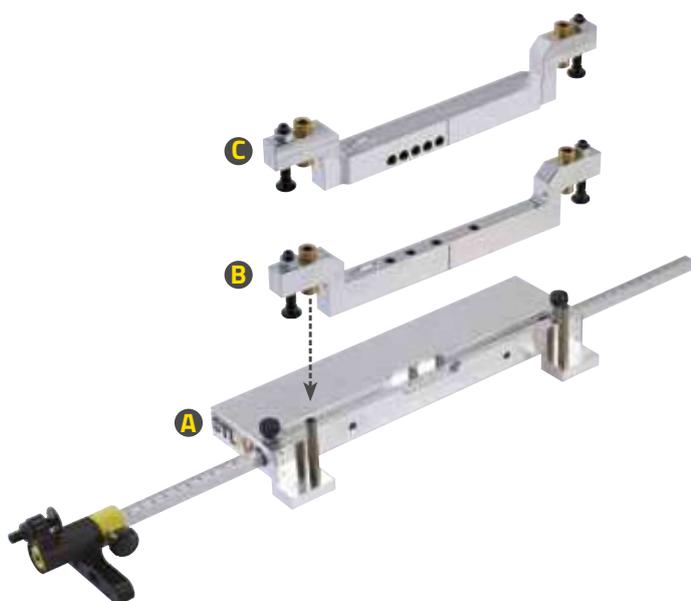

MR A

Aluminium jig for overlay doors - for ROLLACTA

CODE	Pcs / Box	PRICE PCS.
 MRA	1	On request

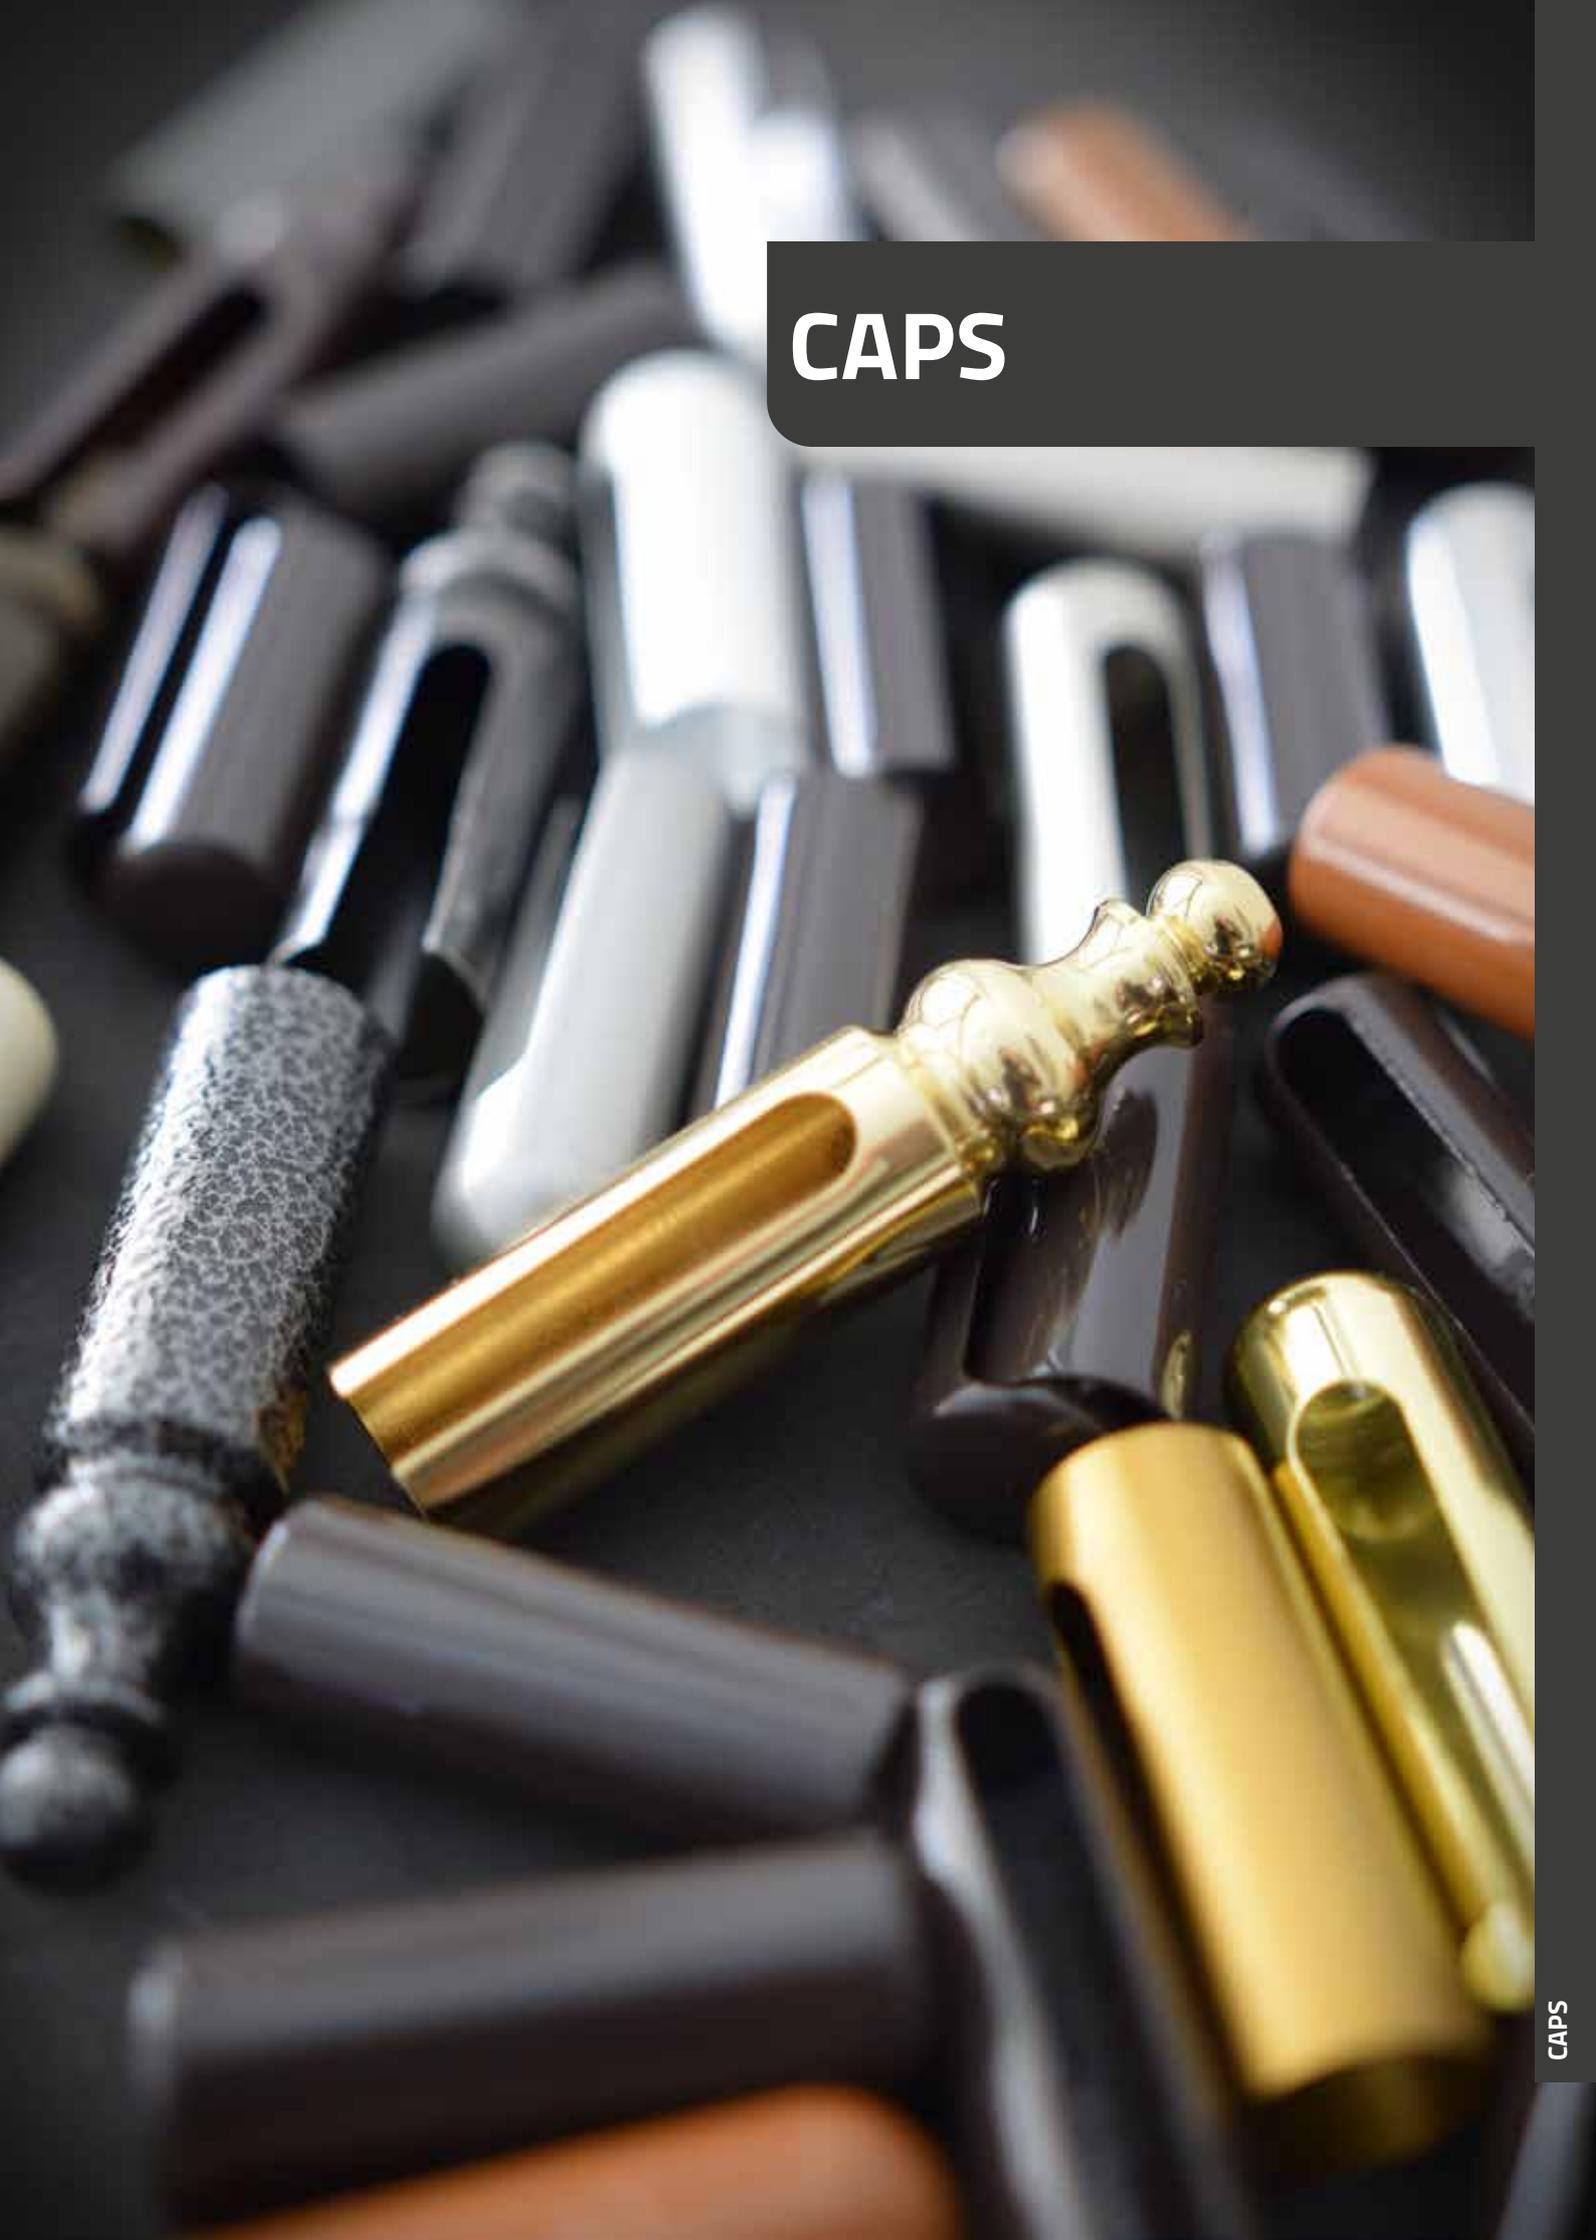

The jig for Rollacta, thanks to its own characteristics, allows an easy, precise and quick installation of the hinges. Composed of a basic part **(A)** suitable to be fixed on all types of UPVC profiles. The kits **(B e C)** are customized according to the used kind of profiles. Suitable to be used equally well on both right and left doors. Graduated rod on request.

GENERAL CONDITIONS OF SALE

This document contains the general conditions of sale (hereafter 'General Conditions') of OTLAV S.p.A., VAT No. 01171050261, Registered Office in Via A. Padovan, 2, 31025 S. Lucia di Piave (TV), Italy (hereafter 'Vendor').

1. Subject

1.1 These General Conditions regulate all sales agreements for the Vendor's products (hereafter 'Products') to be entered into by the Vendor and each purchaser of its Products (hereafter 'Purchaser').

1.2 Waivers or amendments to these General Conditions shall be valid only if expressly accepted in writing by the Vendor, and shall refer only to the specific sales in question.

Therefore, all provisions endorsed on the purchase order or other Purchaser's document, be they in contrast or in addition to these General Conditions, shall be considered null and void unless they are expressly accepted in writing by the Vendor.

2. Conclusion of Sales Agreement

2.1 The Vendor's offer is to be considered valid for a period of thirty (30) days from the date it is made, unless otherwise indicated in the offer. Therefore, the Vendor shall have no obligation to consider any purchase orders received after the end of such term.

2.2 The order transmitted by the Purchaser to the Vendor on the basis of the offer shall contain accurate identification of the Products, the quantity required and any other element essential to conclude the sales agreement.

2.3 The sales agreement shall be considered concluded when the Purchaser receives written order confirmation from the Vendor. Such written confirmation can also be forwarded by e-mail or fax. Alternatively, the Vendor may exercise its discretion and accept the Purchaser's order without sending a formal order confirmation. In no way can express or implicit acceptance of an order by the Vendor be interpreted as acceptance of the Purchaser's general conditions, nor as waiving the application of these General Conditions of Sale.

2.4 Agents and brokers do not commit the Vendor in any way and any orders received from said agents and brokers shall be considered subject to a written order confirmation from the Vendor.

2.5 Following acceptance of an order by the Vendor, the Purchaser may not cancel such order without the Vendor's written consent, which may be subject to a refund of all costs incurred by the Vendor. The Vendor shall have the right to receive damages in the event of unauthorised cancellation of orders by the Purchaser.

3. Products

3.1 Information about Products contained in catalogues, price lists, brochures, websites or other similar instruments, as well as samples, are purely indicative/illustrative. Product conformity shall be assessed exclusively by comparison with the characteristics mentioned in the offer.

3.2 The Vendor reserves the right to modify the Products and technical/sales documentation as it sees fit, without altering the essential features.

3.3 Any requests from the Purchaser for modification after the order has been sent must be made in writing and will be charged for separately.

3.4 The Vendor is not liable for any errors in processing orders, if the Purchaser provides incomplete, missing or wrong indications of the Article Code.

3.5 In the case of bespoke products made specifically for the Purchaser (hereafter 'Special Products') the Vendor reserves the right to prepare a special technical drawing that describes the dimensions and technical characteristics of the product in question. Such document shall be signed and sealed for acceptance by the Purchaser. Acceptance of a technical drawing nulls and replaces all other technical descriptions provided at the preliminary or offer stage. The Vendor cannot be held responsible for errors or omissions deriving from incorrect or incomplete information transmitted by the Purchaser. It is the Purchaser's task to check the required technical characteristics by examining the working project transmitted for its approval before production begins.

3.6 With regard to Special Products, the Vendor may charge the Purchaser with the cost of preparing equipment for the manufacture of such articles. By paying the cost of the equipment the Purchaser acquires the right for the Vendor to use such equipment exclusively for the manufacture of the Special Products for the Purchaser. However, the Vendor remains the owner of the equipment. Should the Purchaser fail to issue orders for a year or a year has gone by from the last production batch with no further orders issued for the Special Products in question, the Purchaser shall lose the above-mentioned exclusive right and at the same time the Vendor shall be free to use the equipment for any reason whatsoever, including scrapping due to lack of use.

4. Retention of Title

4.1 The parties expressly agree that the Vendor shall maintain full ownership of the Products sold until the sum due has been fully settled. Therefore, the Purchaser acquires ownership only after paying the entire price agreed, as well as ancillary expenses, but assumes all risks after taking delivery, as per art. 1523 Italian Civil Code.

4.2 Before the entire price agreed has been paid, the Purchaser cannot let the Products be confiscated or seized without declaring the Vendor's ownership (immediately informing the latter) subject to the operation of the acceleration clause, if just one of the above-mentioned obligations is breached.

4.3 Until full payment of the price the Vendor may send its inspectors to examine the Products in the place where they are stored.

4.4 Where required, the Purchaser shall cooperate with the Vendor in fulfilling the formalities needed to ensure the effectiveness of this retention of title clause in the Purchaser's country.

5. Prices

5.1 Sales prices are calculated according to the supply terms agreed from time to time and are net of any VAT; they may also include any other charges and costs (e.g. transport costs) if indicated on the invoice.

Prices are calculated in Euro.

5.2 If production costs increase in the period between order confirmation or receipt of payment in the case of advance payment, and the scheduled date of delivery of the Products due to factors beyond the control of the Vendor, such as increases in the cost of raw materials, electricity and labour costs (e.g. collective wage agreements) or in the cost of other production factors, the price given in the offer may be reviewed at any time to take such variations into account. Subject to agreements relating to Special Products, either of the Parties may withdraw from the agreement if the Purchaser does not accept the price variations proposed by the Vendor, and the Purchaser shall have no right to damages, refunds or indemnities.

5.3 The Vendor reserves the right to change the prices in the price list at any time, with immediate effect and without notice. Variations to the price lists shall be applied to agreements entered into after the variation comes into effect.

6. Terms of Payment

6.1 Terms of payment are indicated in every order confirmation issued by the Vendor and sent to the Purchaser for each individual sales agreement.

6.2 Unless otherwise agreed, all payments shall be made to the Vendor by bank transfer to the bank indicated by the Vendor. Payments made to collection agents must be duly authorised.

6.3 Where payment by letter of credit has been agreed, such letter of credit shall be issued by a leading bank that adopts the Uniform Customs and Practice for Documentary Credit issued by the International Chamber of Commerce (ICC) in effect on the date the sales agreement is concluded.

6.4 Failure to pay all or part of the sales price on any established due date will give the Vendor the right to apply interest, without the need for formal notice, at the rate applied by the ECB to main refinancing operations, increased by eight percentage points, pursuant to art.4 Italian Legislative Decree No. 231 of 9 October 2002, which receives CE Directive 35/2000, until the date of settlement, subject to any other remedy in the Vendor's favour included in these General Conditions and/or law.

6.5 Failure to settle any sum within 14 (fourteen) days of the established due date gives the Vendor the right to suspend deliveries, also for different existing agreements and to terminate the sales agreement immediately, subject to the right to obtain damages, including the refund of legal expenses connected to credit recovery operations.

6.6 Payments are considered settled when they are actually credited to the Vendor's current account.

7. Product Delivery and Documentation

7.1 Products are delivered to the Purchaser according to the delivery terms agreed from time to time.

7.2 The Vendor shall provide the Purchaser with a Declaration of Performance (DOP) for the Products (where required under the terms of EU Regulation 305/11 and any later amendments and integrations and/or according to other statutory provisions) by publication on its website. A copy on paper may be sent to the Purchaser if requested in writing.

7.3 The Vendor shall provide packing according to the normal method in use.

7.4 As delivery terms agreed between the Parties are indicative, any delays cannot justify claims for refunds or order cancellation by the Purchaser. Any penalty clauses for delayed delivery shall have no effect on the Vendor. In the event of deferred payment, delivery terms shall begin from the date of order confirmation; in the event of payment in advance or by letter of credit, delivery terms shall begin from the date of payment or notice from the bank of the opening of a letter of credit in compliance with the Vendor's requirements. The Vendor reserves the right to make partial deliveries as and when the individual parts are ready for dispatch.

In any case, the Vendor shall have no liability for delayed deliveries due to force majeure, as per art. 10 hereof.

7.5 The Purchaser may apply to the Vendor in writing for collection and transport to be carried out by a courier or shipping agent on its behalf. Should the Vendor accept, the courier or shipping agent shall be considered directly appointed by the Purchaser, who shall be charged with all the risks and expenses involved.

7.6 From consignment of the Products to the first courier, notwithstanding the agreed delivery terms all the risks relating to the Products are transferred to the Purchaser, who shall also be charged with the costs of storage, custody and insurance, or whatever else.

7.7 For Special Products, unless otherwise agreed, the Vendor reserves the right to deliver goods 10% above or below the quantities ordered, due to technical and production needs.

8. Complaints on Delivery and Returns

8.1 The Purchaser shall carefully inspect the Products delivered as soon as possible after receiving them. Any complaints regarding packing, quantity or faulty parts, and in general all complaints regarding defects evident on delivery, shall be sent to the Vendor in writing (by registered letter with return receipt,

PEC, fax or email) no later than eight (8) days from receipt of the Products. With the Vendor's prior written authorisation the parts deemed to be faulty shall be returned in their original packing and the cost of transport and insurance charged to the Purchaser. The Purchaser shall specify the complaint in a separate note which indicates the date and number of the Vendor's invoice to which the returned parts refer. Failure to notify defects promptly and to return the faulty part (when authorised), shall cause the Purchaser to lose the right to claim for the above-mentioned defects.

8.2 Returned goods shall reach the Vendor properly packed and accompanied by a document which clearly states the details of the relative invoice for each individual product. Any returns the Vendor finds to have been tampered with or wrongly used will not be replaced or refunded and will be sent back to the Purchaser, who will be charged any expenses and risks. Returns of Special Products, discontinued articles or goods with defects for which the Vendor is not liable will not be accepted.

9. Guarantee

9.1 The Vendor guarantees that the Products sold have the essential qualities for the use to which they will be put, according to the Product technical specifications and order confirmation, and comply with Italian law as well as the applicable EU Standards and/or any other standards specified in the Vendor's offer. With reference to Products for which the Vendor provides a Declaration of Performance (DOP) pursuant to EU Regulation 305/2011, the Vendor guarantees the Product's conformity to the contents of such Declaration.

The above-mentioned guarantee covers all defects that appear in the Products as a result of normal use and that derive exclusively from defects in materials or workmanship extant before delivery.

The guarantee is issued to the Purchaser only and cannot be extended to successive purchasers of the Products, or third parties in general.

9.2 For the guarantee issued by the Vendor to be valid, the Purchaser shall scrupulously observe the indications in the installation instructions, if applicable, and in the Declaration of Performance (DOP) provided by the Vendor. The guarantee does not apply if the Purchaser is not up to date with payments, if it has not used the Products according to the above-mentioned instructions, if it has made alterations or tampered with the Products or used them for a purpose different from their intended use, or in all possible ways that cause damage or faulty operation due to the fault or negligence of the Purchaser, its employees and auxiliary workers or third parties in general, including incorrect installation or maintenance.

9.3 The Vendor's guarantee does not cover any damage due to wear caused by installation and use that does not comply with the terms of the Declaration of Performance (DOP) or the installation instructions. Neither does the Vendor's guarantee cover any damage due to incorrect storage of Products held entirely or partly in a warehouse by the Purchaser prior to installation, use or resale to end customers.

9.4 Subject to art.8 of these General Conditions (Complaints on Delivery and Returns), the Purchaser shall report any defects in the Products to the Vendor in writing within 8 (eight) days of their discovery. Such report shall be forwarded by fax or e-mail, followed by a registered letter with return receipt. Any report of defects shall specify precisely the defect found and the Products involved. Any other form of report is excluded, particularly those by word of mouth.

Failure to provide the above promptly will deprive the Purchaser of the right to invoke the Vendor's guarantee according to these General Conditions and/or law.

With prior authorisation, the faulty material shall be sent by the Purchaser to the Vendor's facilities for the necessary checks. Transport costs for authorised returns shall be paid by the Purchaser. The faulty parts will become the Vendor's property after replacement.

9.5 If the Vendor's inspection confirms the reported defect, the Vendor may exercise its incontestable judgement to replace the faulty Product or eliminate the defects. Faulty Products shall be replaced ex the Vendor's works.

9.6 The guarantee granted under the terms of this article 9 is the only, exclusive guarantee provided to the Purchaser and replaces every other form whatsoever of expressed or implicit guarantee, whether provided for by law or trade customs. The remedies granted to the Purchaser on the basis of these General Conditions shall be considered the only, exclusive remedies.

In addition, the Vendor's contractual and/or non-contractual liability for direct or indirect damage deriving from the Products supplied, or from any breach of contract by the Vendor, is also expressly excluded, except in the case of willful misconduct or gross negligence.

The Purchaser shall indemnify and hold harmless the Vendor from and against damage caused by elements of the Product supplied by the Purchaser (including, but not limited to, components, plans, etc.).

9.7 This agreement also expressly excludes the Purchaser's right to suspend or delay payments in the event of complaints; neither can the Purchaser independently reduce prices and/or offset sums owed by it for Product prices with amounts the Purchaser deems due to it for any reason.

10. Force Majeure

10.1 The Vendor shall not be liable to the Purchaser for breach of any clause in these General Conditions and/or sales agreement, if fulfilment is made impossible or excessively costly due to unpredicted events beyond its control. Such events include, by way of example but not limited to, the following: fires, floods, earthquakes, explosions, accidents, wars, uprisings, insurrections, sabotage, epidemics or pandemics, restrictions due to quarantine, strikes, labour shortages, transport stops, lack of electricity, raw materials, components

or machinery for the manufacture of the Products, natural events, acts by any public authority, including foreign, and significant increases in production costs.

10.2 If a force majeure impedes or delays delivery of the Products to the Purchaser, or the fulfilment of any one of the Vendor's other obligations for a period exceeding six (6) consecutive months, the Vendor shall have the right to terminate the sales agreement with no liability of any kind towards the Purchaser.

11. Distinguishing Marks on Products

11.1 The Purchaser undertakes not to delete or remove the Vendor's signs and other distinguishing or identification marks on the Products and/or on the Vendor's documents.

11.2 It is understood that neither these General Conditions nor individual sales agreements grant the Purchaser any rights whatsoever (e.g. licenses or other) to the Vendor's distinguishing marks. Any use by the Purchaser of the Vendor's distinguishing marks is prohibited, unless the Vendor authorises such use in writing.

12. Termination of Sales Agreement

The Vendor has the right to immediately terminate the sales agreement entered into on the basis of these General Conditions, and in the cases expressly provided for in these Conditions and applicable regulations, if the Purchaser's economic situation changes in such a way as to compromise its ability to meet its obligations or if the Purchaser is, for example, put into liquidation, insolvency or subjected to other bankruptcy procedures.

In such case, the Vendor shall have the right to require full settlement of any sums still due from the Purchaser.

13. Industrial and Intellectual Property Rights

13.1 Unless the Parties have agreed otherwise in writing, the Vendor is and remains the exclusive owner of all industrial and intellectual property rights connected with the Products supplied, including their single parts, documentation and material prepared in executing the agreement (e.g. drawings, graphs, plans, samples, files, and other material developed to provide design services).

13.2 In any case, the Vendor shall keep the only and exclusive ownership of every and any pre-existing industrial property developed by the Vendor before entering into the agreement with the Purchaser, as well as all the industrial property the Vendor may develop at any time later without using the Purchaser's confidential information or industrial property.

13.3 Each party shall protect the other in the event of breaches of third party's industrial and intellectual property rights, on the understanding that the party responsible for the breach is immediately informed in writing by the other party. If final judgement finds that due to the Vendor's fault the Product breaches the rights of third parties, the Vendor may choose whether to replace, alter or withdraw the Product with no further liability.

14. Confidentiality

Any information provided by the Vendor to the Purchaser with reference to a sales agreement or potential sale shall be considered at all times strictly confidential, whatever the way or means in which the information is provided. The Purchaser may use such information for the sole purpose of assessing or fulfilling a sales agreement with the Vendor, with the exclusion of any other purpose. The Purchaser may not reveal or disclose any such information to third parties, with the exception of a limited number of its employees or consultants who necessarily need to have it.

15. Severability

If any one of the clauses in these General Conditions is considered invalid or ineffective, such invalidity or ineffectiveness shall not compromise the validity of the other clauses, which shall continue to be valid.

16. Incoterms

Unless otherwise agreed in writing, any delivery terms agreed between the Vendor and Purchaser shall be interpreted pursuant to the International Chamber of Commerce (ICC) INCOTERMS in force on the date of the sales agreement.

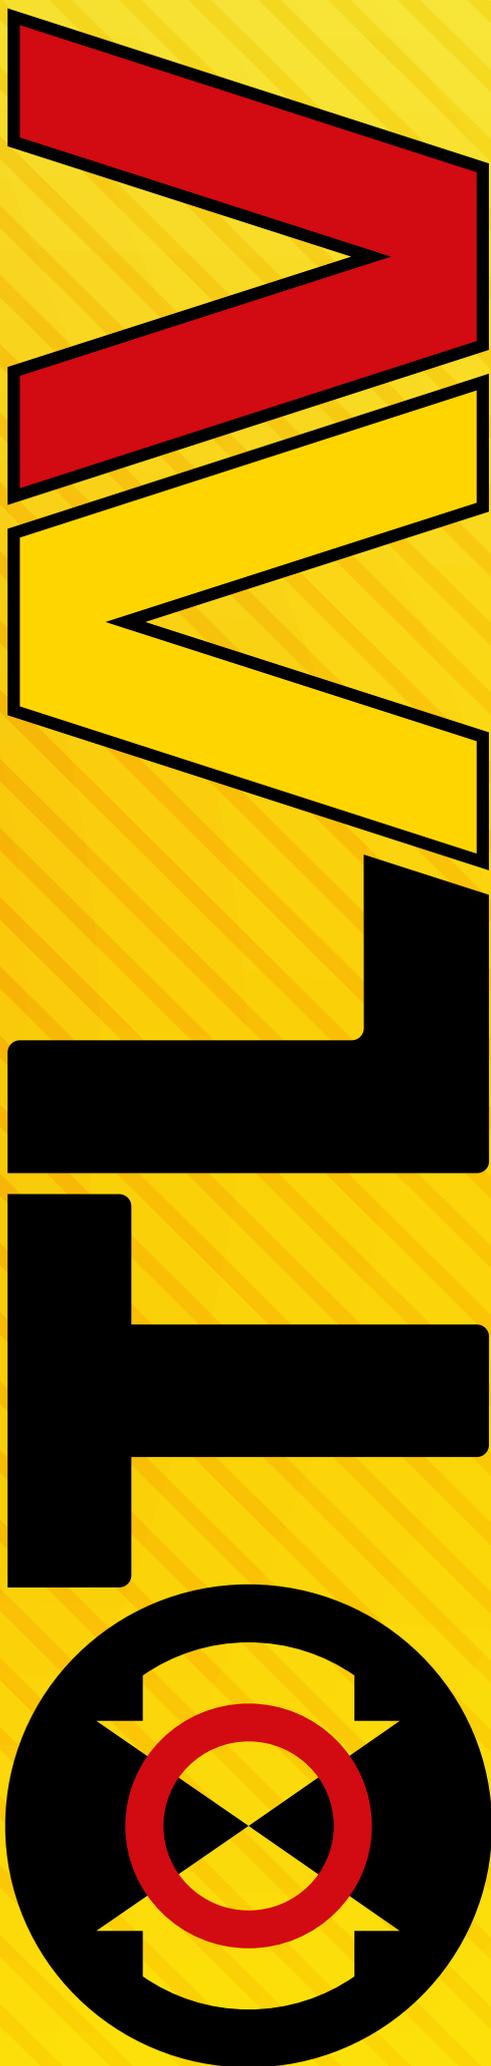

17. Applicable law

These General Conditions and any sales agreement entered into in compliance with them are regulated by Italian law.

18. Jurisdiction and Competent Court

18.1 Any controversy arising from these General Conditions and/or from sales agreements entered into pursuant to them shall fall under Italian jurisdiction and the Court of Treviso shall have exclusive competence.

18.2 Waiving art.18.1, it is agreed that as an alternative to the above, and at its sole discretion, the Vendor shall have the right to sue the Purchaser in the competent Court in the latter's jurisdiction.
