Cerniere invisibili e ferramenta per l'architettura e l'arredo
Architectural concealed hinges and hardware for furnishing
Bisagras ocultas y ferretería para el arquitectura y mobiliario

100% made in Italy

L'accumulo di esperienza diventa una crescita di cultura, inclusa quella cultura materiale che è la storia degli artefatti di un popolo, di una nazione. È l'allenamento storico-culturale al gusto e alla qualità che rende il "Made in Italy" una marca così altamente distinguibile. Ceam si migliora costantemente da oltre 60 anni, nel distretto dell'arredamento più apprezzato al mondo, per portare in tutti i continenti un prodotto esclusivamente "Made in Italy" sinonimo di design, affidabilità e qualità.

The accumulation of experiences becomes a cultural rising, including that material culture which is the history of the artefacts of a nation. It is the historical-cultural training to the excellence and quality that makes "Made in Italy" a worldwide highly recognizable brand. Ceam is constantly improving since 1962, in the most appreciated furniture industrial district in the world, to bring in all five continents a product exclusively "Made in Italy", synonymous of design, quality and reliability.

La acumulación de experiencias se convierte en un crecimiento cultural, incluida aquella cultura material que es la historia de los artefactos de una nación. Es el entrenamiento histórico-cultural a la excelencia y a la calidad que hace el "Made in Italy" una marca muy reconocible en todo el mundo. Ceam se mejora constantemente desde el 1962, en el más apreciado distrito industrial de muebles en el mundo, para llevar en los cinco continentes, un producto exclusivamente "Made in Italy" sinónimo de diseño, calidad y fiabilidad.

made in italy

Company

Ceam Amadeo Spa nasce nel 1962 grazie all'intraprendente curiosità di Celesteantonio Amadeo che, sfrattando la mucca dalla stalla di famiglia, vi pone il primo macchinario per la produzione di manufatti metallici, dando vita ad un anello fondamentale della catena che forma il noto distretto artigianale del mobile della Lombardia.

Seguendo le tendenze del mercato, dapprima italiano, poi europeo ed oggi mondiale, Ceam è cresciuta anno dopo anno specializzandosi nella produzione di cerniere invisibili per mobili, tavoli, e serramenti, oltre ad altri componenti metallici per la costruzione di arredi.

Giunti oggi alla seconda generazione, sono l'entusiasmo di Marina e l'equilibrio di Davide che spingono l'azienda nel suo naturale percorso di crescita.

Attento alle novità pur mantenendo vive le tradizioni, il management è in costante relazione con i clienti per i quali Ceam è un affidabile ed innovativo punto di riferimento. Fiore all'occhiello della produzione è la serie di cerniere regolabili S.T.A.R.S. (sistema a tre assi regolabili singolarmente) che porta nei primi anni 2000 un'importante innovazione estetica e tecnologica nel mondo della porta.

Ceam Amadeo Spa was born in 1962, thanks to the pushing curiosity of Celesteantonio Amadeo who, throwing out the cow from the family stable, placed the first machine for metallic manufactures, creating a vital link in the chain that forms the classy furniture industrial district of Lombardy.

Following market trends, first Italian, then European and later worldwide, Ceam has grown year after year specializing in the production of concealed hinges for cabinets, tables, doors, besides other metallic components for furniture making.

Today the second generation, the enthusiasm of Marina and the balance of Davide, drive the business in a natural growth path. They take care to the news keeping the traditions alive in constant relationship with customers that consider Ceam a reliable and innovative reference point. Flagship is the adjustable hinges series called S.T.A.R.S. (sistema a tre assi regolabili singolarmente) which, in the early 2000s, took an important aesthetic and technological innovation in the door industry.

Ceam Amadeo Spa nace en el 1962, gracias a la gran curiosidad de Celesteantonio Amadeo, desalojando a la vaca del estable de familia, pone la primera máquina para la fabricación de productos de metal, creando un enlace vital en la cadena que forma el conocido distrito industrial de muebles de Lombardia.

Siguendo las tendencias del mercado, en el comienzo italiano, a continuación europeo y hoy mundial, Ceam ha ido creciendo año tras año, especializándose en la producción de bisagras ocultas para mesas, puertas y ventanas, así como otros componentes metálicos para la construcción de muebles.

Llegando la segunda generación, son el entusiasmo de Marina y el equilibrio de Davide que impulsan la empresa la vía de crecimiento natural. Atentos a las novedades, manteniendo vivas las tradiciones, están en relación constante con los clientes para los que Ceam es un punto de referencia fiable e innovador.

Emblema de la producción es la serie de bisagras ajustables S.T.A.R.S. (Sistema con tres ejes ajustables individualmente), que conduce a principios de 2000 unas importantes innovaciones estéticas y tecnológicas en el mundo de la puerta.

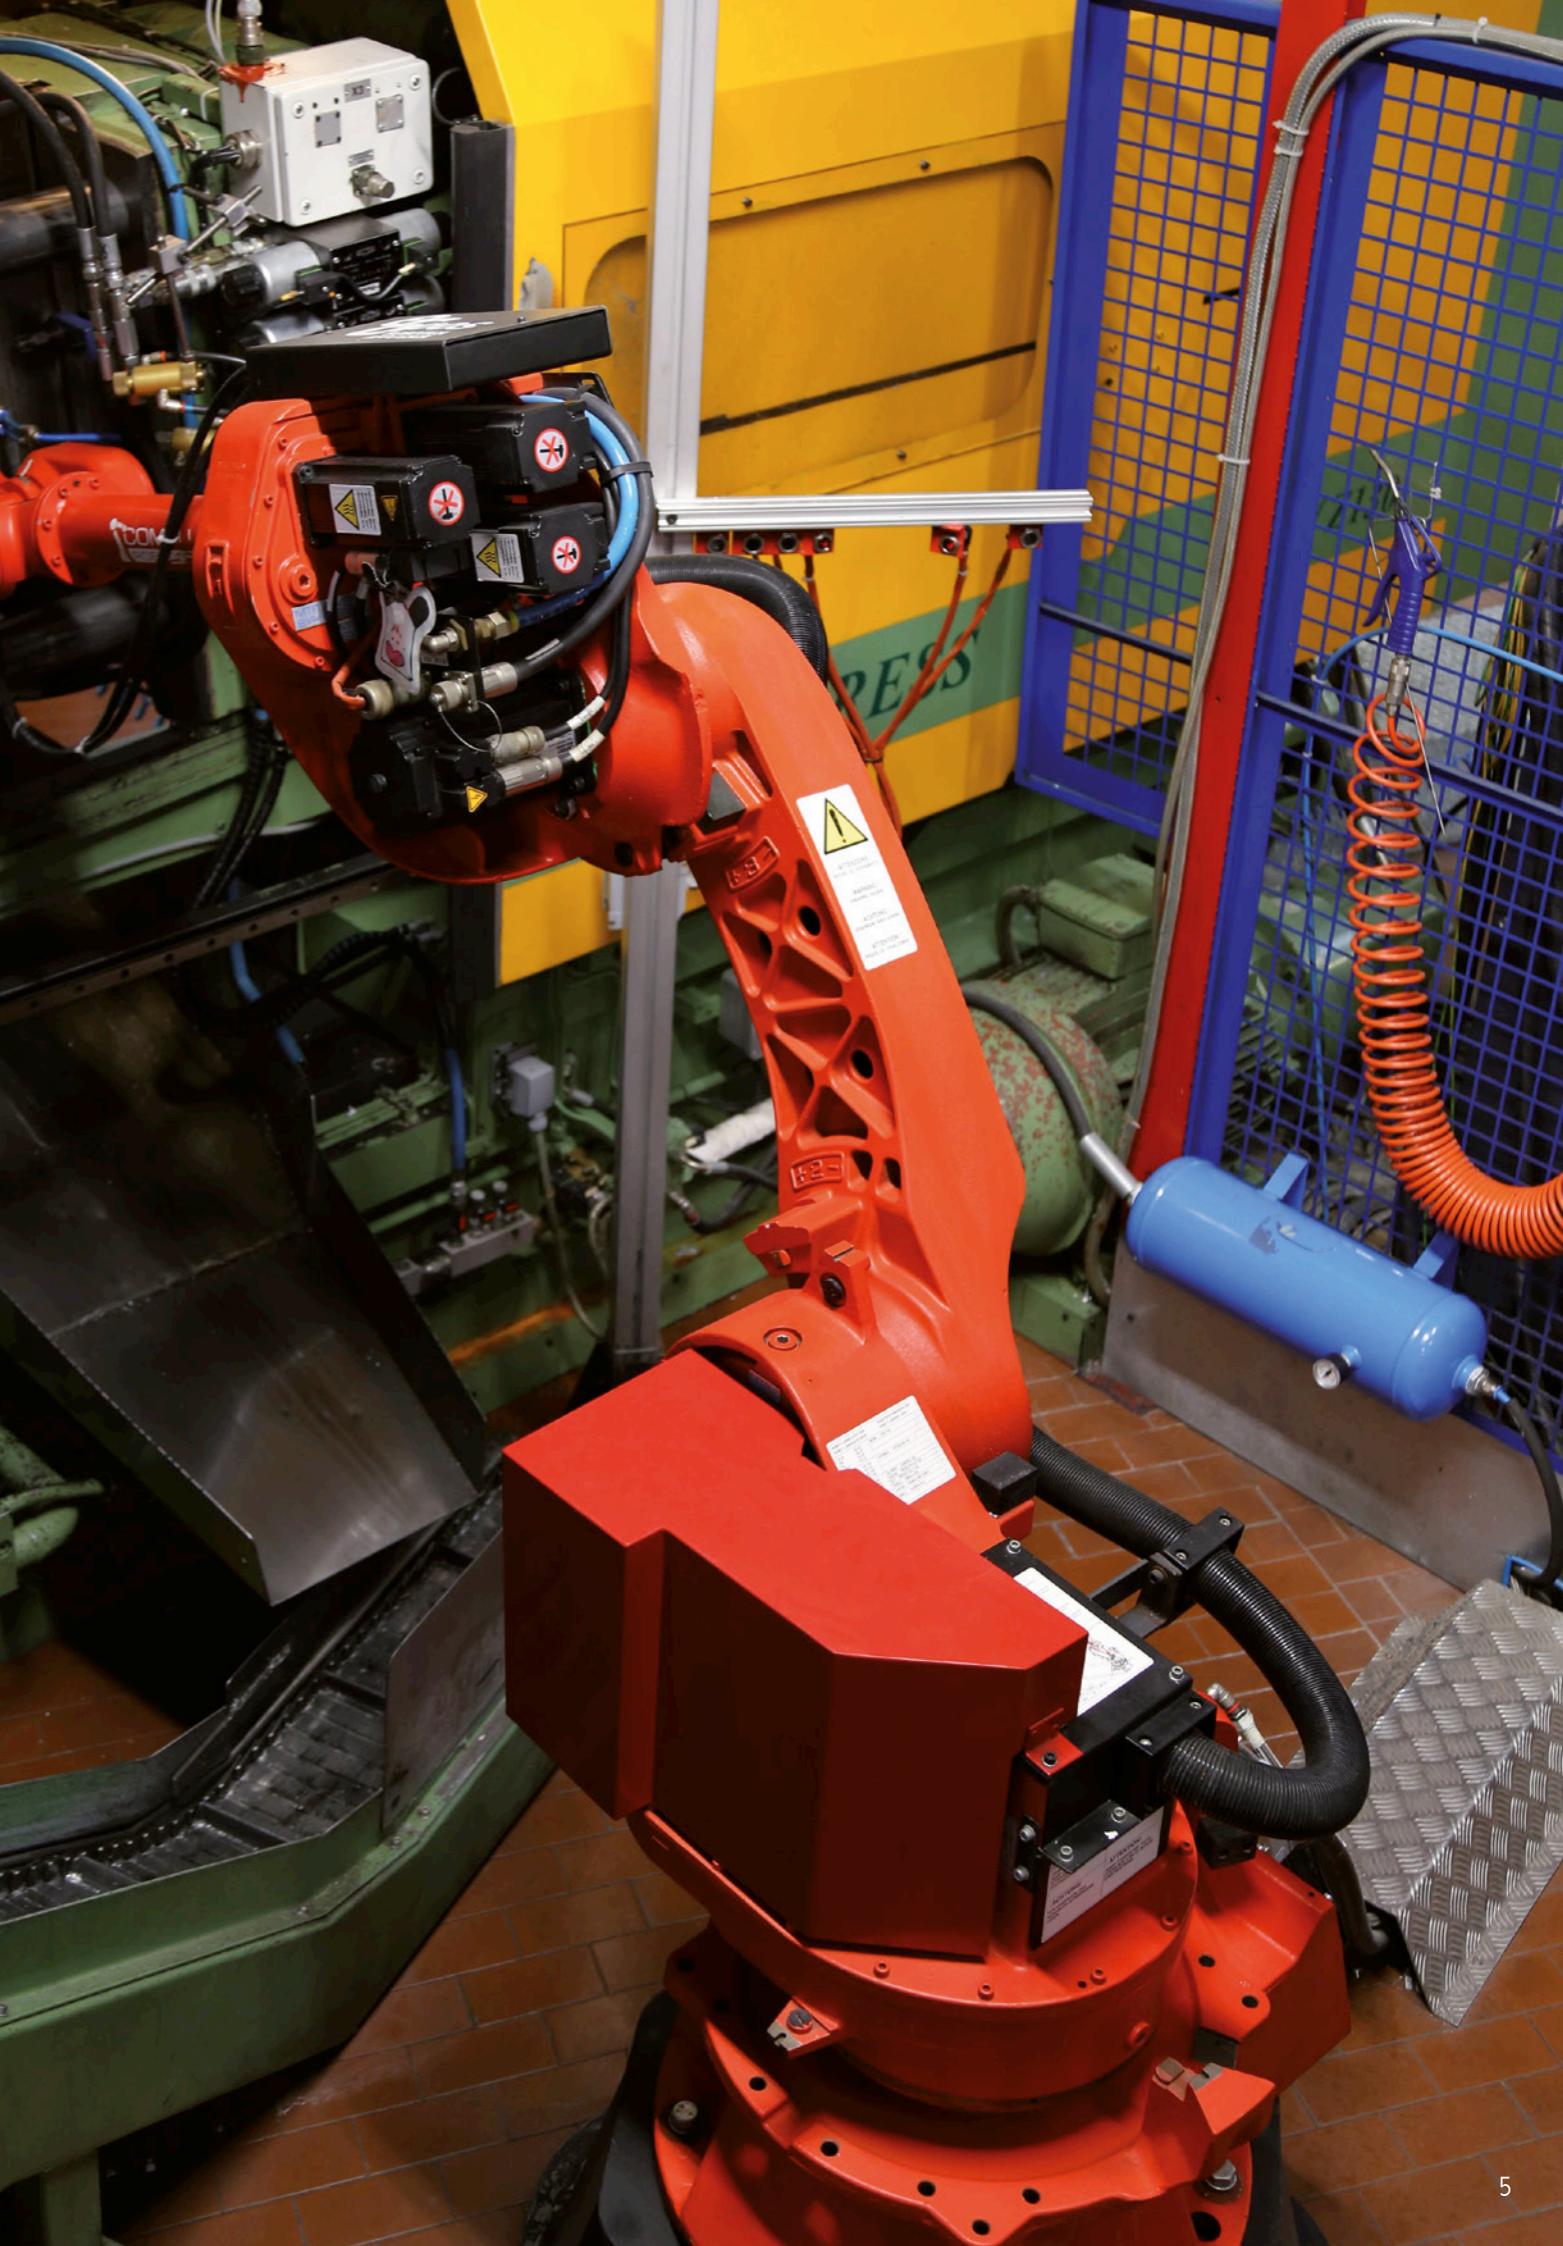

La cerniera deve essere meccanicamente affidabile e conforme per permettere il movimento sicuro della porta durante tutta la sua funzione.

La funzionalità deve essere garantita nel lunghissimo periodo e ben oltre le garanzie standard.

A questo scopo è all'interno della pianta industriale di Cermenate, Como, che vengono espletate tutte le fasi del processo produttivo di Ceam: dalla progettazione, alla messa a punto degli attrezzisti, passando per lo stampaggio, la truciatura e le torniture dei migliori materiali, per finire con il montaggio automatizzato e la logistica.

The hinge must be mechanically reliable and suitable to allow the safe movement of the door during its entire function. The functionality must be guaranteed in the long term, well beyond the normal warranty standard. For this purpose, it's all inside the industrial plant Cermenate, Como, where are carried out all stages of Ceam's production process: from design, tool making, through moulding, cuttings and turnings of the best materials, ending with the automatic assembly and logistic department.

La bisagra debe ser mecánicamente fiable y adapta para permitir el movimiento seguro de la puerta durante la totalidad de su función. La funcionalidad se debe garantizar en el largo plazo, mucho más allá de las normales leyes de garantía. Para este propósito, es adentro de la planta industrial de Cermenate, Como, que se lleva a cabo todas las etapas del proceso de producción de Ceam: desde el diseño, al desarrollo de las matrices, a través de moldeos, cortes y torneados de los mejores materiales, para terminar con el montaje automático y el departamento logístico.

Tabella di portata cerniere per porte - Panoramica

Door hinges load capacity chart - Overview

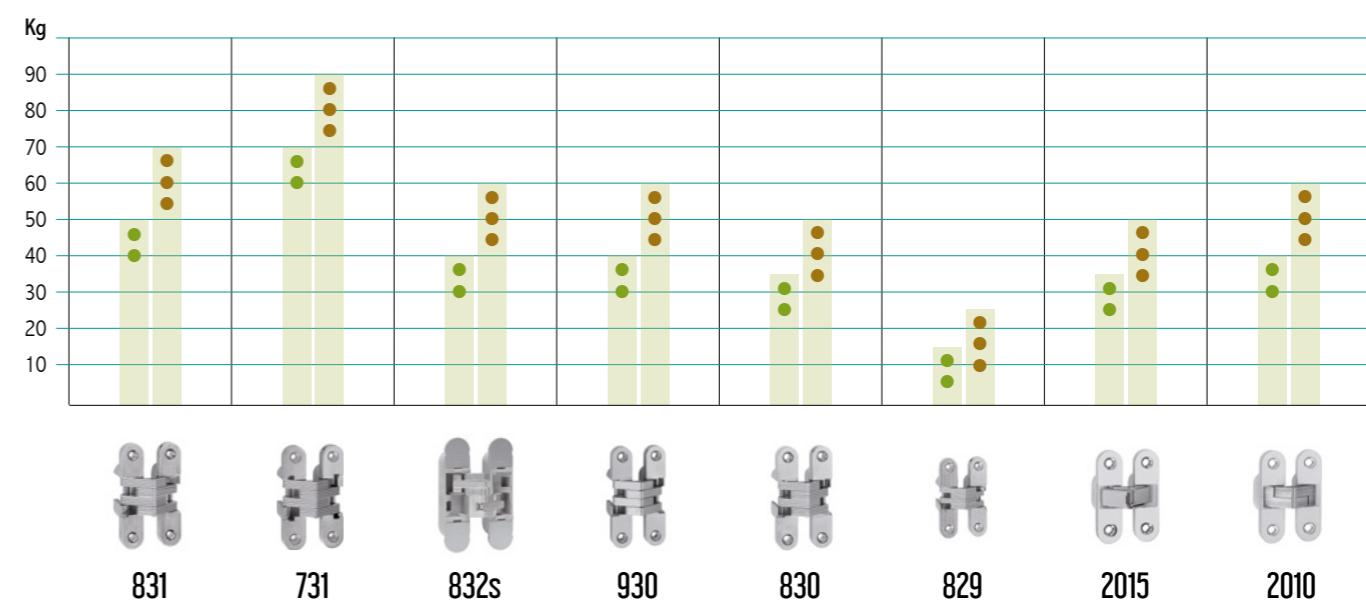

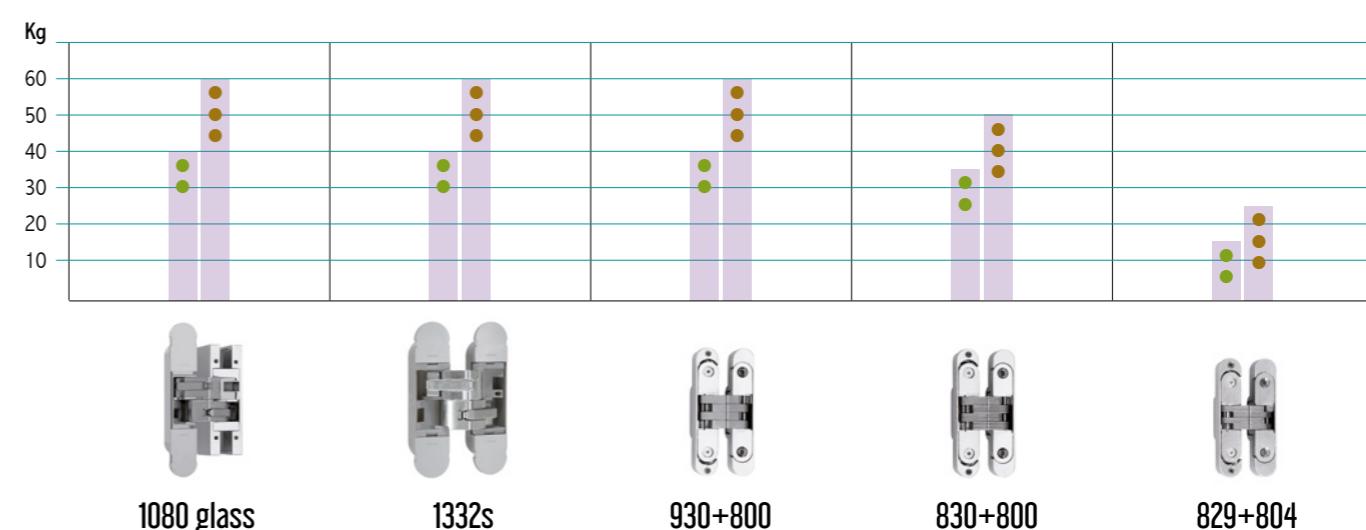

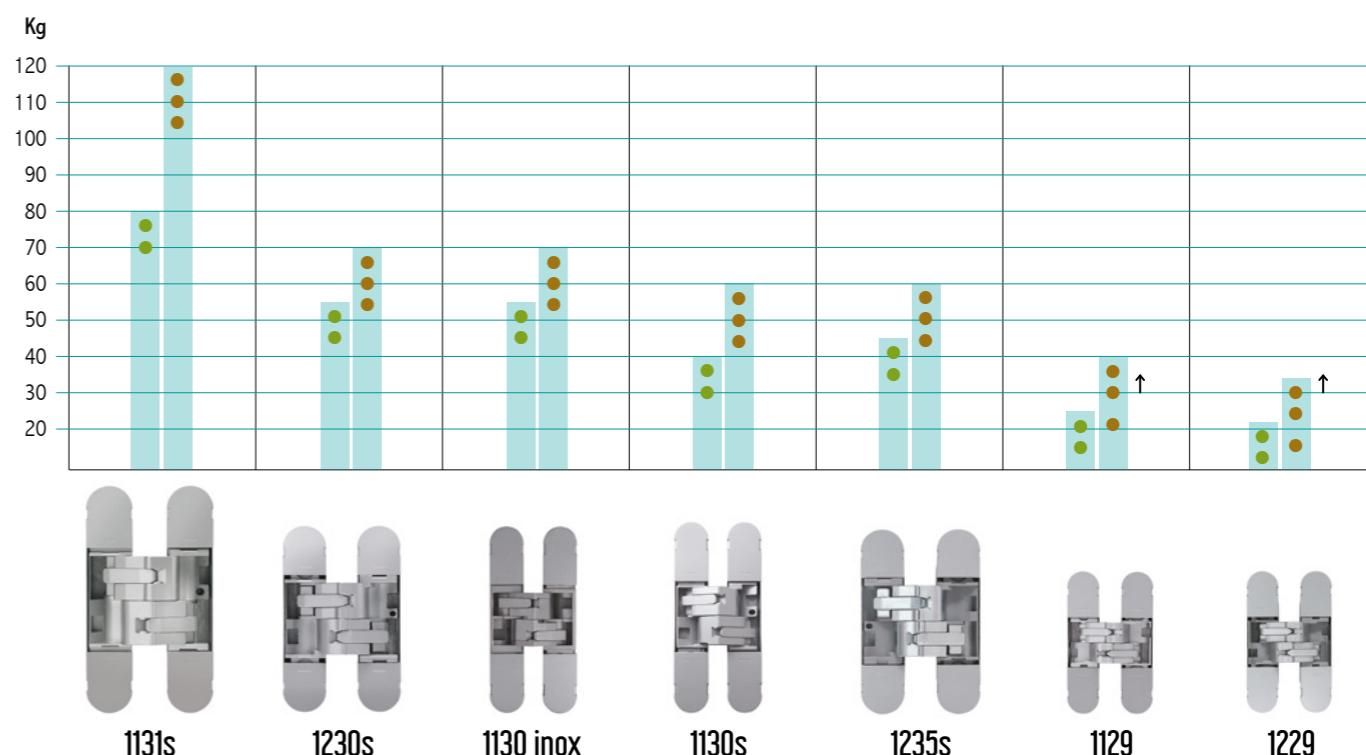

Capacidad de carga de bisagras para puertas - Resumen

LEGENDA - LEGEND - LEYENDA

I valori di portata indicati si riferiscono a parametri di confronto stabiliti da Ceam su porte di dimensioni standard 2100x900. Per approfondimenti, consultare le singole schede articolo.
The load capacity chart values refer to comparison parameters selected by Ceam on a standard door 2100x900. For more details, please see the single data sheets.
Los valores de capacidad de carga de la tabla se refieren a parámetros de comparación establecidos por Ceam, en puerta de dimensiones estandar 2100x9000. Para más informaciones, consultar las fichas técnicas individuales.

3D hinges: Key features

ARCHITECTURAL APPEAL

Cerniere invisibili dal design minimale e curate elegantemente con 12 finiture galvaniche.

Concealed hinges elegantly designed and finished in 12 stunning galvanic colours.

Bisagras ocultas con diseño minimalista y finamente acabadas en 12 preciosos colores galvanicos.

ENGINEERING

Pensate e realizzate in 4 diversi materiali Zama, acciaio inox, alluminio e Fibra di vetro, tutte le cerniere Ceam sono simmetriche e studiate per risolvere le sfide della costruzione moderna.

Manufactured in 4 different materials: zinc-alloy, stainless steel, aluminium and Fiberglass, all Ceam hinges are symmetrical and engineered to solve the new challenges of the modern buildings.

Diseñadas y fabricadas en 4 materiales diferentes Zamak, acero inoxidable, aluminio y fibra de vidrio, todas las bisagras Ceam son simétricas y están pensadas para resolver los desafíos de la construcción moderna.

ADJUSTABLE

Fluida apertura a 180° e regolabili in 3 dimensioni: altezza, larghezza e profondità.

Fluid 180° opening and adjustable in 3 dimensions: height, width and depth.

Fluida abertura a 180° y ajustables en 3 dimensiones: altura, anchura y profundidad.

MINIMAL

Poco invasive e dunque versatili, le cerniere Ceam lasciano spazio alla fantasia del cliente.

Possono essere installate su telai in legno, alluminio e in acciaio. Spessore minimo cerniera 18 mm "Best in Class".

Minimally invasive, symmetric therefore versatile, all Ceam hinges leave room to client's imagination.

They can be installed on wooden, aluminium or steel profiles. Minimum hinge depth 18 mm "Best in Class".

Poco invasivas y, por tanto, versátiles, las bisagras Ceam dejan espacio a la imaginación del cliente.

Se pueden instalar en marcos de madera, aluminio y acero. Espesor mínimo de la bisagra 18 mm "Best in Class".

UP TO 215 KG

Sicure, solide ed affidabili: testate per resistere a 200.000 cicli e anche adatte a porte tagliafuoco.

Safe, solid, reliable: our hinges are tested to last for 200.000 cycles and now also on Fire rated doors.

Seguras, sólidas y confiables: ensayadas para pasar 200,000 ciclos de apertura y también adecuadas para puertas cortafuego.

EASY-INSTALLATION

Easy installation: la parte anta e la parte telaio possono essere assemblate separatamente in produzione ed unite in fase di posa.

Easy installation: the door part and the frame part can be assembled separately in production and united on-site.

Fácil instalación: la parte de la puerta y la parte del marco se pueden montar por separado en la producción y unidos durante la colocación.

100% MADE IN ITALY

Dal 1962, ci specializziamo con dedizione alla manifattura di cerniere invisibili.

From 1962, we specialize with dedication, in manufacturing concealed hinges.

Desde 1962, nos especializamos con dedicación en la fabricación de bisagras ocultas.

ULTRA CERTIFICATE

Azienda Iso 9001-2015 - Cerniere testate secondo le normative Europee di sicurezza CE, e adatte per porte tagliafuoco fino a EI120'.

Company ISO 9001-2015; hinges tested according to safety European norms CE, also suitable for Fire rated doors up to EI120'.

Empresa ISO 9001-2015 - bisagras ensayadas según normas Europeas de seguridad CE, aptas para Puertas Cortafuego hasta EI120'.

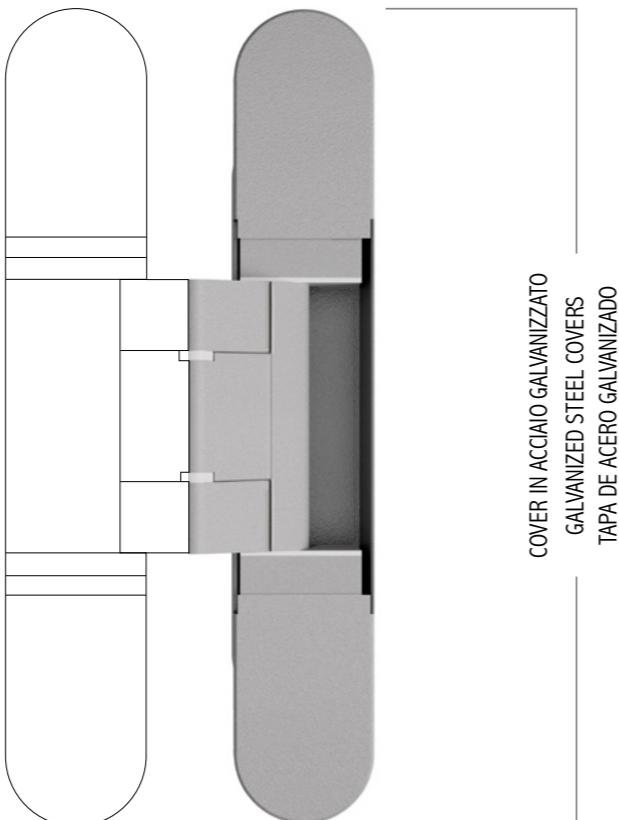

Easy INSTALLATION

I due lati simmetrici e la ridotta profondità del corpo cerniera rendono la preparazione della porta veloce e sicura. Il lato cerniera che va sulla porta e quello che va sullo stipite possono essere preparati in produzione e assemblati in cantiere.

The symmetric sides and the reduced hinge depth make the door preparation quick and safe.

The door part and frame part can be assembled separately in production and joined on-site.

Los dos lados simétricos y la reducida profundidad del cuerpo de la bisagra hacen que la preparación de la puerta sea rápida y segura. El lado bisagra que va en la puerta y el que va en el marco pueden ser preparados en producción y montados en obra.

ADJUSTMENT

Svitare per muovere il corpo interno e quindi la porta verso la posizione preferita. Poi serrare le viti per un perfetto funzionamento.

Unscrew to move the internal body, and therefore the door, to your preferred position. Then tighten it for operational perfection.

Desenrosque para mover el cuerpo interno y por lo tanto la puerta a la posición deseada. Luego apriete los tornillos para un perfecto funcionamiento.

VERTICAL ADJUSTMENT

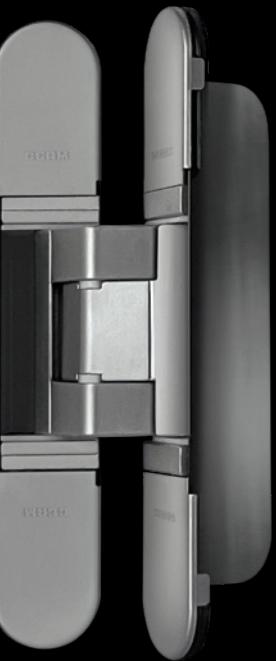

Make sure the door will always be at the right height.

HORIZONTAL ADJUSTMENT

Align the door to the wall for stunning flush effects.

DEPTH ADJUSTMENT

Finely adjust the gap between door and frame.

Cerniere invisibili regolabili per porte
Invisible adjustable hinges for doors
Bisagras invisibles ajustables para puertas

Cod. CI001432 xxx00

Disponibile in 12 finiture. Vedi aletta di copertina.

Available in 12 finishes. Please see the inside cover flap.

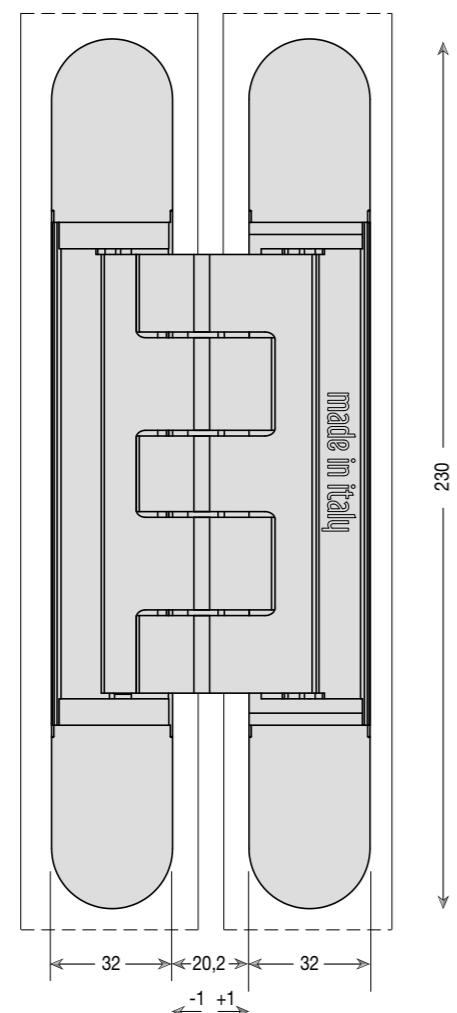

Disponible en 12 acabados. Ver en la solapa.

CARATTERISTICHE:

- Pensata per porte molto pesanti:
portata fino a 215 kg
- Spessore minimo porta di 38 mm
- Simmetrica e profonda solo 32 mm
- Fresata fino a 6,5 mm dal bordo interno

MAIN FEATURES:

- Engineered for heavy doors:
load capacity up to 215 kg
- Minimum door thickness 38 mm
- Symmetric and only 32 mm deep
- Milling cut up to 6,5 mm from the internal edge

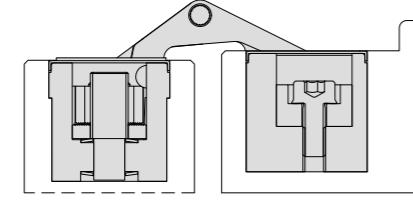

① Snodo realizzato in Zama
Mechanism manufactured in zinc-alloy
Mecanizado fabricado en zamak

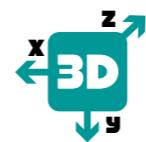

② Covers in acciaio galvanizzato
Galvanized steel covers
Cover en acero galvanizado

③ Gabbia interna in Zama

CARATTERISTICHE:

Lo snodo evoluto garantisce un fluido movimento traslativo che permette di incrementare* del 70% lo spazio interno di rotazione

- Realizzata in zama in 12 diverse finiture: **da oggi disponibile anche in Verniciato Bianco**
- Adatta per ante con uno spessore minimo di 28 mm
- Adatta per porte con ricopertura in Poliestere
- Lunghezza totale 128 mm
- Profonda solo **21 mm**
- Regolazione 3D con unico utensile
- Portata fino a 60 kg e 1000 mm di larghezza anta
- Easy installation e simmetria di cava

MAIN FEATURES:

The evolved mechanism ensures a fluid translational movement which allows to increase* by 70% the internal space of rotation

- Manufactured in zamak in 12 different finishes: **now available in White painted**
- Suitable for doors of 28 mm min. Thickness
- Suitable for polyester overcoating doors
- Total length 128 mm
- Depth **21 mm** only
- 3D adjusting system with one simple tool
- Load capacity up to 60 kg and 1000 mm wide panels
- Easy installation and slot symmetry

CARACTERÍSTICAS:

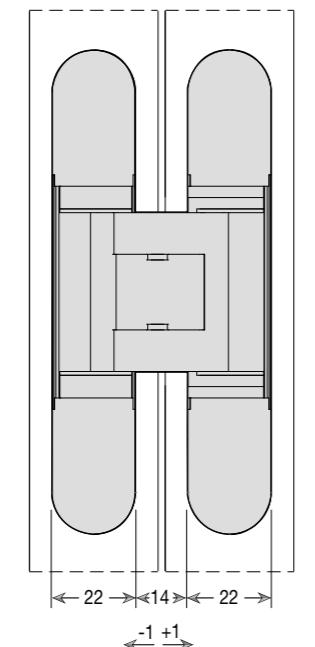

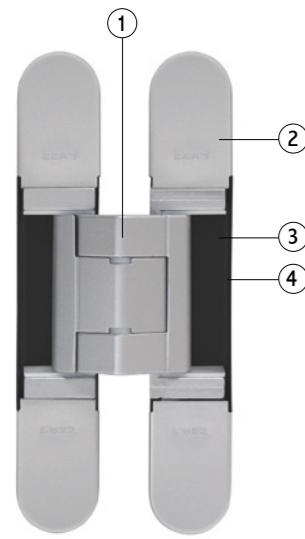

El mecanismo evolucionado asegura un fluido movimiento translativo que aumenta* de un 70% el espacio interno de rotación

- Fabricada en zamak en 12 acabados diferentes: **ahora disponible en Barnizado Blanco**
- Apta para puertas con espesor mín. de 28 mm
- Apta para puertas con recubrimiento en Poliéster
- Longitud total 128 mm
- Profundidad de solamente **21 mm**
- Ajuste en 3D con una única herramienta
- Capacidad de carga hasta 60 kg y paneles hasta 1000 mm de ancho
- Easy installation y simetría de corte

Cod. CIOS1131 xxx00

Disponibile in 11 finiture. Vedi aletta di copertina.

Available in 11 finishes. Please see the inside cover flap.

Disponible en 11 acabados. Ver en la solapa.

CARATTERISTICHE:

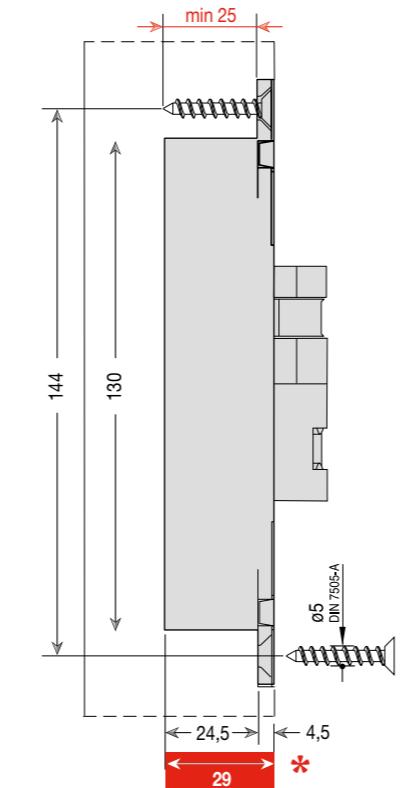

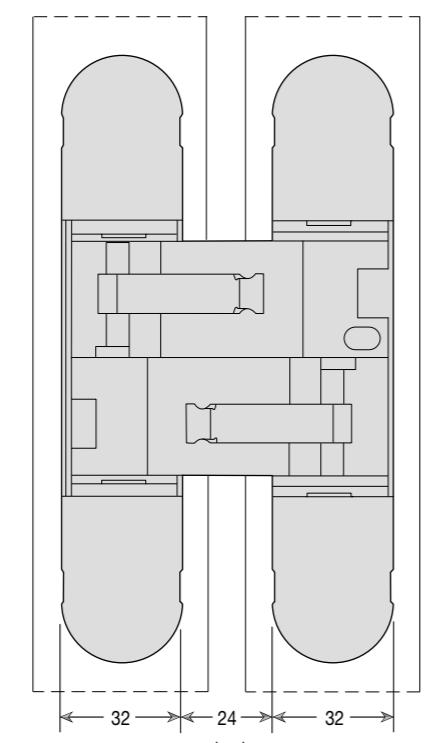

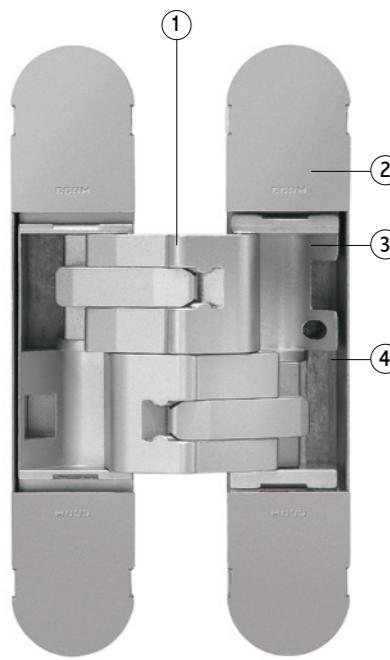

- Realizzata in zama in 11 diverse finiture
- Ideale per ante con spessore minimo di 38 mm
- Lunghezza totale 160 mm
- Profondità solo 29 mm
- Regolazione tridimensionale S.T.A.R.S.
- Portata fino a 120 kg
- Easy installation e simmetria di cava
- Rivista in estetica e funzionalità: più elegante e resistente all'ossidazione grazie alla nuova cassa esterna in zama zincata. Snodo evoluto per una migliore performance: movimento più fluido, deciso, durevole e ora certificato per porte fino a 1000 mm di larghezza

MAIN FEATURES:

- Manufactured in zamak in 11 different finishes
- Suitable for doors of 38 mm min. thickness
- Total length 160 mm
- Depth 29 mm
- 3D adjusting system S.T.A.R.S.
- Load capacity up to 120 kg
- Easy installation and slot symmetry
- Revised in aesthetics and operation: now more elegant and resistant to oxidation due to the new external case in zincked zamak. Joint evolved for better performance: smoother movement, extremely precise, durable and now certified for doors up to 1000 mm wide

CARACTERÍSTICAS:

- Fabricada en zamak en 11 acabados diferentes
- Adapta para puertas con un espesor mínimo de 38 mm
- Longitud total 160 mm
- Profundidad de solamente 29 mm
- Ajuste en 3D S.T.A.R.S.
- Capacidad de carga hasta 120 kg
- Easy installation y simetría de corte
- Revisada en estética y funcionalidad: ahora más elegante y resistente a la oxidación gracias a la nueva carcasa exterior en zamak cincado. Mecanismo evolucionado para un mejor rendimiento: movimiento más fluido, determinado, duradero y ahora certificado para puertas de hasta 1000 mm de ancho

Maintenance **FREE**

CARATTERISTICHE:

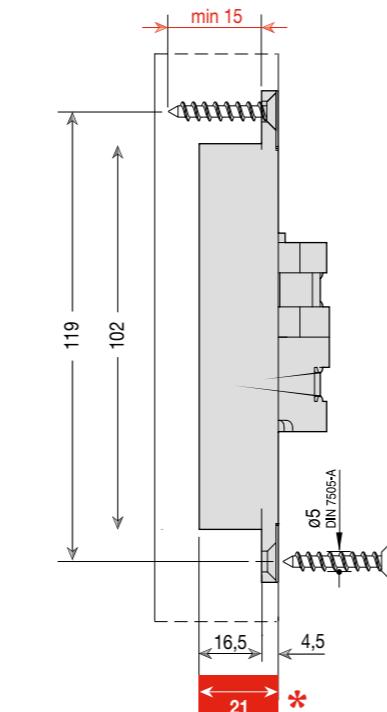

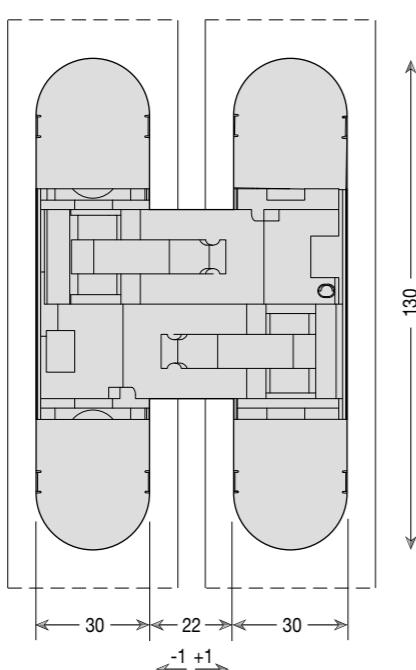

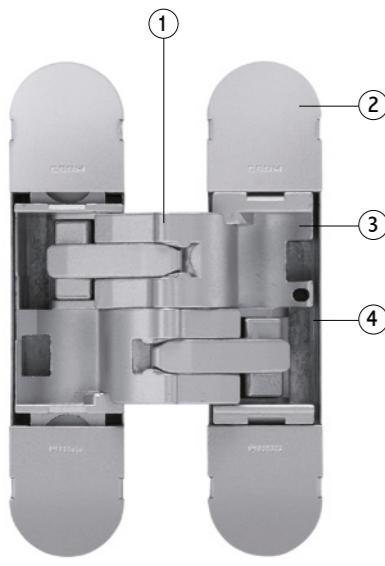

- Realizzata in zama in 11 diverse finiture
- Adatta per ante con spessore minimo di 35 mm
- Range di reversibilità elevato: centrale per ante da 35 a 45 mm di spessore
- Adatta in caso di uso di battiscopa o rivestimento fino a 15,5 mm
- Lunghezza totale 130 mm
- Profondità solo **21 mm**
- Regolazione tridimensionale S.T.A.R.S.
- Portata fino a 70 kg
- Easy installation e simmetria di cava
- Rivista in estetica e funzionalità: più elegante e resistente all'ossidazione grazie alla nuova cassa esterna in zama zincata. Snodo evoluto per una migliore performance: movimento più fluido, deciso, durevole e ora certificato per porte fino a 1000 mm di larghezza

MAIN FEATURES:

- Manufactured in zamak in 11 different finishes
- Suitable for doors of 35 mm min. thickness
- Big reversibility range: central for doors from 35 to 45 mm thick
- Suitable in case of baseboard or claddings till 15,5 mm
- Total length 130 mm
- Depth **21 mm** only
- 3D adjusting system S.T.A.R.S.
- Load capacity up to 70 kg
- Easy installation and slot symmetry
- Revised in aesthetics and operation: now more elegant and resistant to oxidation due to the new external case in zincked zamak. Joint evolved for better performance: smoother movement, extremely precise, durable and now certified for doors up to 1000 mm wide

CARACTERÍSTICAS:

- Fabricada en zamak en 11 acabados diferentes
- Adapta para puertas con un espesor mínimo de 35 mm
- Grande rango de reversibilidad: central para puertas desde 35 hasta 45 mm de espesor
- Adapta en casos de zócalos u revestimientos hasta 15,5 mm
- Longitud total 130 mm
- Profundidad de solamente **21 mm**
- Ajuste en 3D S.T.A.R.S.
- Capacidad de carga hasta 70 kg
- Easy installation y simetría de corte
- Revisada en estética y funcionalidad: ahora más elegante y resistente a la oxidación gracias a la nueva carcasa exterior en zamak cincado. Mecanismo evolucionado para un mejor rendimiento: movimiento más fluido, determinado, duradero y ahora certificada para puertas de hasta 1000 mm de ancho

Cod. CIOS1235 ARG00
Cod. CIOS1235 VN000Cerniere invisibili regolabili per porte
Invisible adjustable hinges for doors
Bisagras invisibles ajustables para puertas

CARATTERISTICHE:

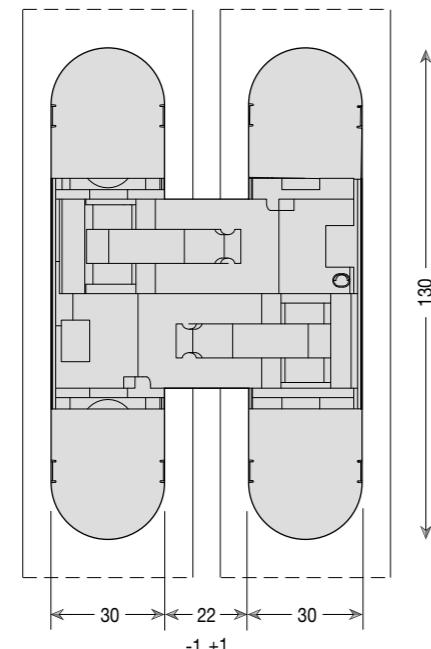

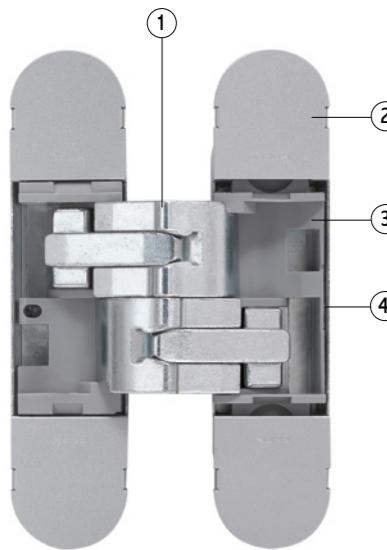

- Il giusto compromesso tra resistenza e leggerezza: 1235s è il modello "Ibrido" realizzato principalmente in Zama con gabbie interne in fibra di vetro.
- Adatta per ante con spessore minimo di 35 mm
- Range di reversibilità elevato: centrale per ante da 35 a 45 mm di spessore
- Adatta in caso di uso di battiscopa o rivestimento fino a 15,5 mm
- Lunghezza totale 130 mm
- Profondità solo **21 mm**
- Regolazione tridimensionale S.T.A.R.S.
- Portata fino a 60 kg
- Easy installation e simmetria di cava
- Resistente e Ultralight: solo 445 g

MAIN FEATURES:

- The perfect compromise between strength and lightness: 1235s is the "hybrid" model, mainly manufactured in zamak with internal body in fibreglass.
- Suitable for doors of 35 mm min. thickness
- Big reversibility range: central for doors from 35 to 45 mm thick
- Suitable in case of baseboard or claddings till 15,5 mm
- Total length 130 mm
- Depth **21 mm** only
- 3D adjusting system S.T.A.R.S.
- Load capacity up to 60 kg
- Easy installation and slot symmetry
- Tough and Ultralight: just 445 g

CARACTERÍSTICAS:

- El perfecto compromiso entre fuerza y levedad: 1235s es el modelo "ibrido" hecho principalmente de zamak con cajas internas en fibra de vidrio
- Adapta para puertas con un espesor mínimo de 35 mm
- Grande rango de reversibilidad: central para puertas desde 35 hasta 45 mm de espesor
- Adapta en casos de zócalos o revestimientos hasta 15,5 mm
- Longitud total 130 mm
- Profundidad de solamente **21 mm**
- Ajuste en 3D S.T.A.R.S.

1229

mm.100x22

Cod. CI001229 NIKOO
Cod. CI001229 ARGOO
Cod. CI001229 VN000

CARATTERISTICHE:

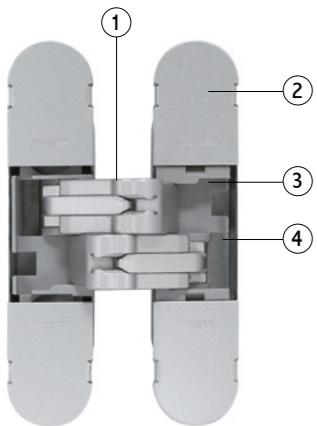

- Il giusto compromesso tra resistenza e leggerezza: 1229 è il modello "Ibrido" realizzato principalmente in Zama con gabbie interne in fibra di vetro
- Adatta per ante con spessore minimo di 28 mm
- Lunghezza totale 100 mm
- Profondità solo **18 mm** "la meno ingombrante sul mercato"
- Regolazione tridimensionale S.T.A.R.S.
- Portata fino a 34 kg
- Easy installation e simmetria di cava
- Resistente e Ultralight: solo 209 g

MAIN FEATURES:

- The perfect compromise between strength and lightness: 1229 is the "hybrid" model, mainly manufactured in zamak with internal body in fibreglass
- Suitable for doors of 28 mm min. thickness
- Total length 100 mm
- Depth **18 mm** only "the smallest on the market"
- 3D adjusting system S.T.A.R.S.
- Load capacity up to 34 kg
- Easy installation and slot symmetry
- Tough and Ultralight: just 209 g

CARACTERÍSTICAS:

- El perfecto compromiso entre fuerza y levedad: 1229 es el modelo "íbrido" hecho principalmente de zamak con cajas internas en fibra de vidrio.
- Adapta para puertas con un espesor mínimo de 28 mm
- Longitud total 100 mm
- Profundidad de solamente **18 mm** "la menor en el mercado"
- Ajuste en 3D S.T.A.R.S.
- Capacidad de carga hasta 34 kg
- Easy installation y simetría de corte
- Resistente y Ultralight: solamente 209 g

REGULATION (EU) No 305/2011 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 9 March 2011 laying down harmonized conditions for the marketing of construction products and amending Directive 89/106/ EEC is repealed

CERTIFICATE OF CONSTANCY OF PERFORMANCE
1220-CPR-1806

In compliance with Regulation (EU) 305/2011 of the European Parliament and of the Council of 9 March 2011 (the Construction Products Regulation or CPR), this certificate applies to the construction product

1129, 1130s, 1030inox, 1131s, 1230s, 1430, 1430 Max and 1431
Multi-axis concealed hinge assemblies

Placed on the market under the name of
CEAM AMADEO SPA
Via Dante Alighieri 5
PO box n 39
IT-22072 Cermenate (Como), Italy

And produced in the manufactured plant
Via Dante Alighieri 5
PO box n 39
IT-22072 Cermenate (Como), Italy

This certificate attests that all provisions concerning the assessment and verification of constancy of performance described in the
ETA 18/0657 issued on 2.05.2022
and
EAD 020001-01-0405

under system 1 for the performances set out in the ETA are applied and that the factory production control conducted by the manufacturer is assessed to ensure the constancy of performance of the construction product.

This certificate was first issued on 25.09.2018 and will remain valid as long as neither the ETA, the construction product, the AVCP methods nor the manufacturing conditions in the plant are modified significantly, unless suspended or withdrawn by the ITeC.

Prestaciones certificadas según el sistema de clasificación de la EN 1935.

1 2 3 4

La certificación e marcatura CE è garanzia che, un prodotto regolamentato nell'Unione europea, è conforme ai requisiti di sicurezza, previsti dalle direttive o regolamenti comunitari applicabili.

La marcatura CE indica che il prodotto è conforme a tutte le disposizioni comunitarie che prevedono il suo utilizzo: dalla progettazione, alla fabbricazione, all'immissione sul mercato, alla messa in servizio del prodotto fino allo smaltimento.

La performance delle cerniere a scomparsa 3D Ceam sono state classificate da una specifica EAD sulla base della normativa EN 1935.

The CE marking is the manufacturer's declaration that the product meets the requirements of the applicable EC directives.

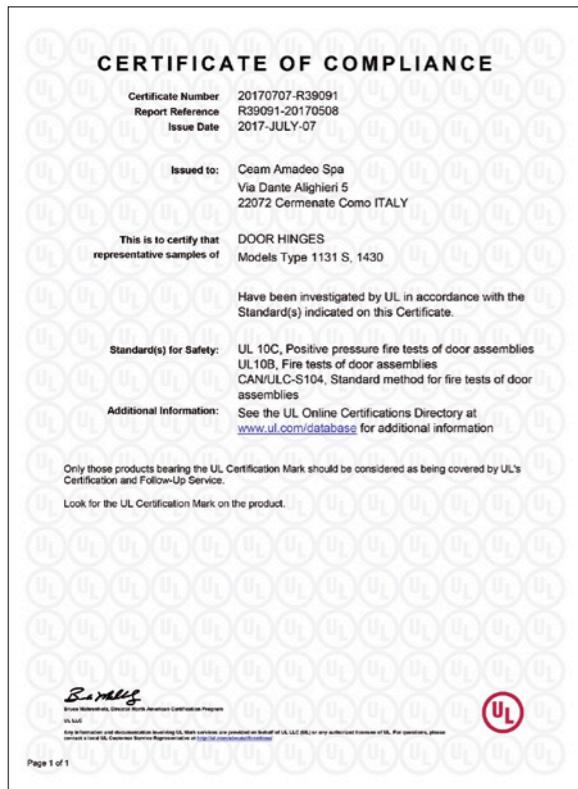

When a manufacturer puts the CE marking on a product it implies that it complies with all the Essential Health and safety requirements from all the directives that applies to its product in all the stages: from the engineering, the manufacturing till the final disposal.

The performances of ceam 3D concealed hinges have been classified in a specific EAD on the normative EN 1935.

El marcado CE es un indicador fundamental de la conformidad de un producto con la legislación de la UE y permite la libre circulación de productos dentro del mercado europeo. Al añadir el marcado CE a un producto, el fabricante declara la conformidad de dicho producto con todos los requisitos legales exigidos para alcanzar el

marcado CE y asegura la validez del producto para ser vendido en todo el Espacio Económico Europeo.

Las prestaciones de las bisagras ocultas 3D Ceam fueron clasificadas por una específica EAD en la base de la norma EN1935.

CARATTERISTICHE:

La dima di foratura - composta da una struttura e due inserti - permette la realizzazione delle cave per l'alloggiamento di cerniere invisibili ed è realizzata in piastre di alluminio dello spessore di 5 mm.

La robustezza dei materiali garantisce la precisa esecuzione delle cave realizzate con un pantografo manuale (fresa ø 16 mm e ghiera esterna da 27 mm in dotazione a tutti i pantografi manuali). Per ogni modello di cerniera vengono utilizzati due tipi di inserti (facilmente sostituibili): uno (A) per eseguire la cava di battuta e l'altro (B) per la cava interna di profondità. Completano l'attrezzatura:

Aste di prolunga (C) permettono di fissare, tramite un anello di nylon (D), la distanza desiderata delle cave sulla porta - sia destra che sinistra - e sullo stipite.

* Morsetti di bloccaggio

Molto importante per il corretto montaggio dell'inserto. Il riferimento stampigliato sulla dima e il codice sugli inserti devono essere sullo stesso lato.

MAIN FEATURES:

The drilling template, which comprises a frame and two inserts, enables implementation of two slots for the invisible hinges, and is made of 5 mm thick aluminium plates.

The strength of the materials guarantees precise execution of the slots with a manual pantograph (16 mm diam. cutter and 27 mm external ring provided for all manual pantographs).

For each hinge model, two types of insertions (easily replaceable) are used: one (A) to execute the butt slots and the other (B) for the internal depth slot.

The equipment is completed with: Extension arms (C) With a nylon ring (D), they allow to establish the desired distance between slots on the door - both left and right - and on the frame.

* Blocking clamps

Very important for the correct use and assembly of the insert. The reference is printed on the template and the code is printed on the same side of the inserts.

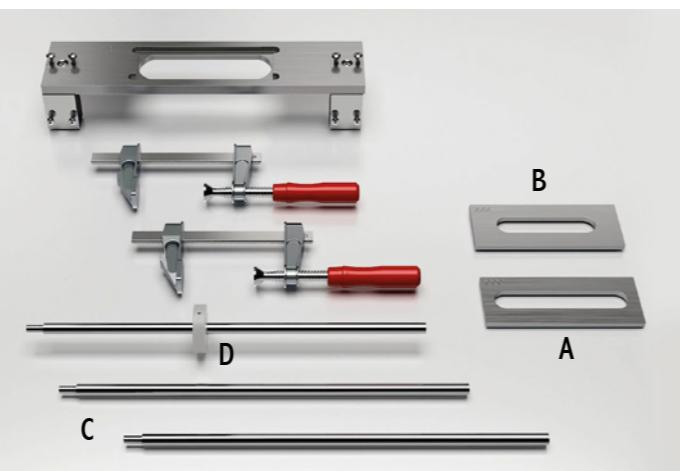

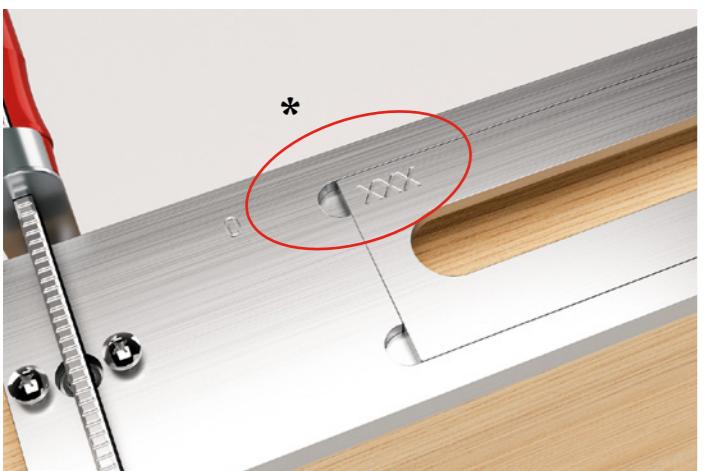

CARACTERÍSTICAS:

La plantilla de perforación, hecha en placas de aluminio de 5 mm de espesor, se compone de una estructura principal y de dobles inserciones (vendidas por separado del cuerpo principal) y permite la realización de los cortes para alojar todas las bisagras invisibles presentes en este catálogo. La resistencia de los materiales garantiza la ejecución precisa de las ranuras hechas con un pantógrafo manual (fresa ø 16 mm y el anillo exterior 27 mm suministrada con todos los pantógrafos manuales).

Para cada modelo de bisagra se utilizan dos tipos de insertos de fácil reemplazo: uno (A) para realizar la ranura de tope y el otro (B) para el corte interno de profundidad. Completan el equipo: barras de extensión (C) que permiten de mantener, a través de un anillo de nylon (D), la distancia deseada entre las ranuras en la hoja de la puerta - derecha e izquierda - y en el marco.

* Prensa de bloqueo

Muy importante para la correcta colocación de el inserto: la referencia marcada en la plantilla y el código de los insertos deben estar en el mismo lado.

Informazioni tecniche

Le seguenti variabili devono sempre essere tenute in considerazione nella scelta delle cerniere per un efficiente funzionamento nel tempo ed evitare possibili malfunzionamenti:

- Dimensioni porta
- Peso dell'anta
- Destinazione d'uso e frequenza di apertura
- Disposizione e montaggio delle cerniere
- Meccanismo chiudiporta e altri accessori
- Azionamento di apertura automatica o semiautomatica

In particolar modo, la cerniera viene sollecitata maggiormente:

- All'aumento del peso della porta
- Alla diminuzione del rapporto altezza/larghezza ovvero, semplificando, all'aumento della larghezza della porta in relazione all'altezza).

Nel catalogo, scheda tecnica e libretto di istruzioni, è presente la tabella di portata per ogni prodotto che orienta l'utilizzatore a determinare il modello, il corretto proporzionamento e la corretta portata del sistema.

ESEMPIO 1430

SCHEMA DI PORTATA CON 2 CERNIERE

2000	65	65	65	53	46	42	39
	700	800	900	1000	1100	1200	1300

LARGHEZZA PORTA (mm)

QUARTA CERNIERA

In alcuni casi, l'impiego di una quarta cerniera può essere determinante per la portata.

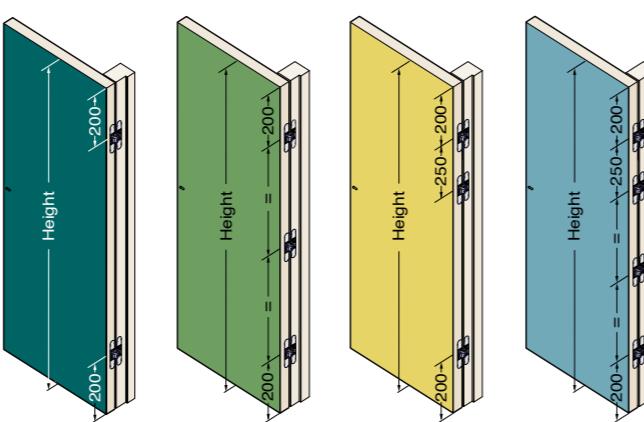

In special modo, quando si hanno porte di grandi larghezze (>1000 mm) o altezze (>2700 mm) sulle quali si producono forze ulteriori per l'effetto leva e il baricentro si sposta, la quarta cerniera deve essere applicata nella parte superiore, a 250 mm di distanza dalla prima cerniera, in modo da incidere positivamente sulla portata.

In caso di altezza porta >3000 mm si consiglia di consultare l'ufficio tecnico. ut@ceamitalia.it

CORRETTA DISPOSIZIONE DELLE CERNIERE SULLA PORTA

Alla diminuzione dell'interasse tra le due cerniere poste alle due estremità (prescindendo dalla presenza di altre cerniere tra esse) corrisponde una maggiore sollecitazione del sistema.

Si consiglia di seguire con cura le indicazioni sugli interassi riportate nel disegno a fianco.

CHIUDIPORTA

Ceam consiglia di montare sempre una terza o quarta cerniera nella parte superiore della porta in presenza di meccanismi chiudiporta in quanto gli stessi modificano le forze di trazione, aumentano il carico e possono alterare la portata delle cerniere. Più in particolare, come da normativa europea di riferimento EN1935:

- Per chiudiporta senza freno all'apertura si consiglia di considerare che la massa effettiva della porta sia maggiore del 20% della massa reale.
- Per i chiudiporta con freno all'apertura (backcheck) l'effetto è decisamente maggiore; si consiglia di calcolare che la massa effettiva dell'anta sia maggiore del 75% della massa reale.

ESEMPIO DI CALCOLO:

- 1- Peso reale della porta: 70 kg.
- 2- Presenza del chiudiporta con backcheck (+75%).
- Calcolo $70 \text{ kg} * 1,75 = 122,50 \text{ kg}$ massa da considerare per il corretto funzionamento del sistema.
- 3- Scegliere e proporzionare le cerniere a seconda delle indicazioni di portata riportate in ogni scheda tecnica di prodotto.
- 4- Posizionare la terza o quarta cerniera sempre a supporto della cerniera superiore.

In caso di dubbi o utilizzi speciali, si prega di contattare preventivamente il nostro ufficio tecnico. ut@ceamitalia.it

FERMAPORTA O SPORGENZE DEL TELAIO/PARETE

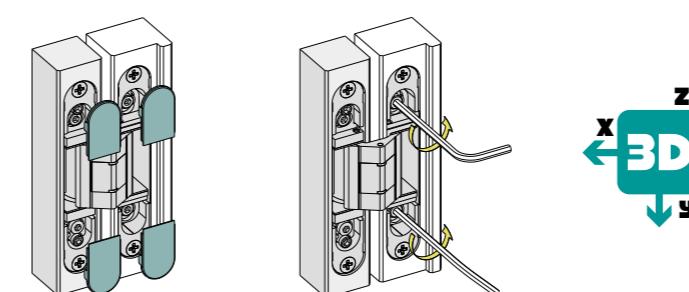

In alcuni casi un fermaporta, una maniglia che batte sulla parete o semplicemente una sporgenza della parete/telaio della porta, possono causare un effetto leva sugli snodi delle cerniere che possono portare a dei malfunzionamenti del sistema. Si consiglia l'installazione di un fermaporta che possa limitare questo effetto leva e si consiglia di posizionarlo ad una distanza dalla cerniera pari al 75% della larghezza della porta in direzione della maniglia.

REGOLAZIONI IN 3 DIMENSIONI

Il range di regolazione è indicato in ciascuna scheda tecnica e le istruzioni di regolazione sono presenti all'interno di tutte le confezioni, sono disponibili online e le video istruzioni sono disponibili sul canale ufficiale YouTube di Ceam.

Tutte le regolazioni della porta richiedono un'adeguata attenzione. Il range di regolazione indicato va assolutamente rispettato. Uno sforzo eccessivo alla regolazione porta di norma ad un mal funzionamento che potrebbe causare la rottura del sistema.

Tutte le cerniere Ceam sono consegnate con tutte le regolazioni centrate in posizione neutra. Dopo l'installazione e dopo ogni regolazione tutti i componenti vanno serrati in modo deciso ma non eccessivo per non comprometterne la tenuta.

- X** - 1 mm / + 1 mm
- Y** - 3 mm / + 3 mm
- Z** - 1,5 mm / + 2,5 mm

Il range di regolazione varia a seconda del modello

TAILOR MADE

In caso di applicazioni speciali e in mancanza di soluzioni tra le cerniere pubblicate su questo catalogo, vi preghiamo di inviare maggiori informazioni sulle vostre necessità, tecniche e di design. Ceam verificherà se esistono prodotti fuori catalogo o adattabili ai vostri requisiti.

NOTE

Le informazioni qui riportate sono da ritenersi delle linee guida indicative. Nella pratica ogni caso specifico è unico: le variabili che incidono sul corretto funzionamento della cerniera possono essere ancora maggiori.

Bisogna avere cura affinché il proporzionamento delle cerniere sia sufficiente da poter soddisfare anche i fattori esterni a quanto qui indicato e contro-verificato nei test effettuati sulle nostre strutture e su quelle dei laboratori esterni accreditati. In modo particolare in edifici pubblici, nei quali compaiono carichi particolari a causa delle elevate frequenze di apertura non sempre calcolabili e della sollecitazione, si dovrebbero impiegare cerniere di dimensioni sufficienti, anche se il peso della porta non lo richiederebbe. Per una performance ideale, a seconda del modello di cerniera, dello scopo e dell'ambiente di utilizzo, potrebbe essere utile, anche se non obbligatorio, lubrificare la cerniera una volta ogni 2 anni, o più a seconda della frequenza di apertura, con un lubrificante al silicone.

Technical information

The following variables must be considered when choosing the right hinges, in order the system to work properly and efficiently and prevent any possible malfunction:

- Door dimensions
- Weight of the door leaf
- Type of use and frequency of opening
- Placement and installation of the hinges
- Door closer and other accessories
- Automatic or semi-automatic opening systems

In particular, hinges are increasingly stressed:

- By increasing door weight
- By decreasing height/width ratio or, simplifying, by increasing of the door width in relation to the door height.

In the catalog, technical sheets and instruction sheets, you can find the load capacity chart for every single product. These charts give clear orientations to the end user to determine the right model, the proper combination and positioning of the whole system.

EXAMPLE 1430

2 HINGES LOAD CAPACITY CHART							
DOOR HEIGHT (mm)	700	800	900	1000	1100	1200	1300
2200	50	50	50	49	41	37	34
2100	50	50	50	45	39	35	32
2000	50	50	50	41	36	33	31
1900	50	50	45	38	34	32	29
	700	800	900	1000	1100	1200	1300

3 HINGES LOAD CAPACITY CHART							
DOOR HEIGHT (mm)	700	800	900	1000	1100	1200	1300
3000	65	65	65	65	65	65	65
2900	65	65	65	65	65	65	65
2800	65	65	65	65	65	65	61
2700	65	65	65	65	65	65	57
2600	65	65	65	65	65	61	53
2500	65	65	65	65	57	50	
2400	65	65	65	62	53	47	
2300	65	65	65	57	50	45	
2200	65	65	63	53	47	42	
2100	65	65	58	49	44	40	
2000	65	65	65	53	46	42	39
	700	800	900	1000	1100	1200	1300

DOOR CLOSERS

When using door closer devices, Ceam suggest installing a third or a fourth hinge in the upper part of the door, given that these mechanisms modify the opening forces, increase the load and may alter the capacity of the hinges.

In particular, as reported by the European norm EN1935:

- For closers without backcheck Ceam suggest adding 20% on top of the real door weight.
- For closers with backcheck the effect it is much greater: Ceam suggest adding 75% on top of the real door weight.

CALCULATION EXAMPLE:

- 1- Real door weight: 70 kg.
 - 2- Door closer with backcheck to be installed (+75%).
 - Calculation $70 \text{ kg} * 1,75 = 122,50 \text{ kg}$ is the actual weight to be considered for the proper system functionality.
 - 3- Choose and proportion the hinges according to the load capacity charts reported in every technical datasheet.
 - 4- Place the third or fourth hinge in the upper part, 250mm below the first hinge.
- For any doubt or special uses, please contact our technical department. ut@ceamitalia.it

DOOR STOPPERS OR FRAME/WALL PROTRUSIONS

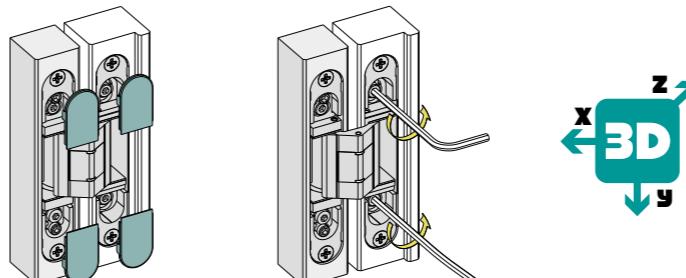

In some cases, a door stop, a handle hitting the wall or simply a protrusion of the wall/door frame can cause a leverage effect on the hinge joints which can lead to a system malfunction. It is advisable to install a door stop which can limit this leverage effect, and it is advisable to position it at a distance from the hinge equal to 75% of the door width in the direction of the handle.

3D ADJUSTMENTS

The adjustment range is reported in every technical sheet and the instructions are placed in every box and available online and the video instructions are available in our YouTube channel.

Every adjustment requires adequate attention. The adjustment range reported must be absolutely respected. Excessive force during adjustments takes to possible malfunctions that could cause system failure.

All Ceam hinges are delivered with all the adjustments centered (neutral position). After installation and after each adjustment, all components must be tightened firmly but not excessively in order not to compromise functionality.

- X** - 1 mm / + 1 mm
- Y** - 3 mm / + 3 mm
- Z** - 1,5 mm / + 2,5 mm

Adjustment range varies according to different hinge models

All Ceam hinges are manufactured in Italy and tested by the standard European norm EN1935, passing all the necessary tests of stress, corrosion resistance, overload and durability both on our internal certified machines and on external laboratories structures, credited for the CE mark, available on the vast majority of our 3D range.

FOURTH HINGE

In some cases, the use of a fourth hinge may be decisive for the load capacity.

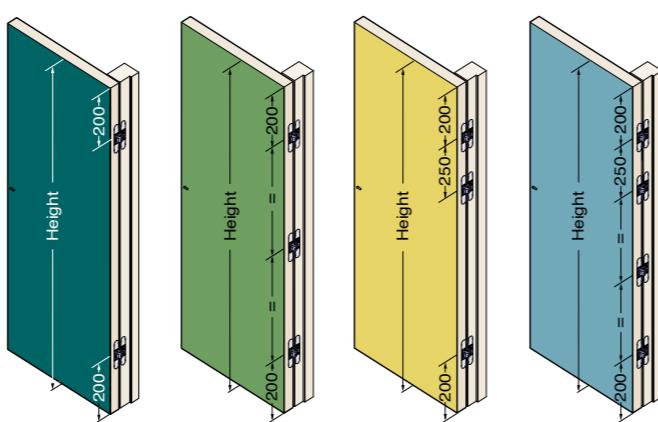

More specifically, In case of big widths ($>1000 \text{ mm}$) or heights ($>2700 \text{ mm}$) when different forces are produced by leverage effect and center of gravity moves towards the lock side, the fourth hinge must be installed in the upper part of the door, 250 mm away from the first hinge, to positively affect the weight capacity.

In case of door height $>3000 \text{ mm}$ please contact our technical department. ut@ceamitalia.it

PROPER PLACEMENT OF THE HINGES ON DOORS

The less the distance between the two hinges placed at the two extremities of the door (independently of a third/fourth hinge between them), the more stress the hinges experience.

We strongly suggest following the centre-to-centre measurements reported aside.

TAILOR MADE

If you have special applications and none of the published hinges on this catalog can be used, please send us more information about your technical and design needs. Ceam will check if some of our hinges can be modified to suit your requirements.

NOTES

The information herewith reported are indicative guidelines. In practice, every specific case is unique and the variables that affect the correct functioning of the hinge can be even more.

The customer must be sure that hinges proportions secure even external factors beyond what is indicated and verified by tests done in our facilities and in external laboratories credited facilities. In particular in public buildings, where, due to the high opening frequencies not always calculable and special stress, should be used an adequate number of hinges, even if the weight of the door does not require

For an ideal performance, depending on hinge model, scope and environment, it could be useful, even if not mandatory, to lubricate the hinge once every two years, or more, depending on the frequency of opening using a silicon type lubricant.

Información técnica

A la hora de seleccionar las bisagras deben tenerse siempre en cuenta las siguientes variables para un funcionamiento eficaz a lo largo del tiempo y evitar posibles fallos:

- Dimensiones de la puerta (ancho y altura)
- Peso de la puerta
- Uso previsto y frecuencia de apertura
- Disposición y montaje de las bisagras
- Mecanismo cierrapuertas y otros accesorios
- Accionamiento de apertura automática o semiautomática

En particular, la bisagra está sometida a una mayor tensión:

- Al aumentar el peso de la puerta
- A la disminución de la relación altura/ancho (es decir, simplificando, al aumento del ancho de la puerta en relación con la altura).

En el catálogo, en la ficha técnica y en el folleto de instrucciones, hay una tabla de capacidad de carga para cada producto que orienta al usuario a la hora de determinar el modelo, la correcta disposición y la correcta capacidad de carga del sistema.

EJEMPLO 1430

CAPACIDAD DE CARGA CON 2 BISAGRAS							
ALTURA PUERTA (mm)	700	800	900	1000	1100	1200	1300
	50	50	50	49	41	37	34
	50	50	50	45	39	35	32
	50	50	50	41	36	33	31
	50	50	45	38	34	32	29
	700	800	900	1000	1100	1200	1300

CAPACIDAD DE CARGA CON 3 BISAGRAS							
ALTURA PUERTA (mm)	700	800	900	1000	1100	1200	1300
	65	65	65	65	65	65	65
	65	65	65	65	65	65	65
	65	65	65	65	65	65	61
	65	65	65	65	65	65	57
	65	65	65	65	65	61	53
	65	65	65	65	65	57	50
	65	65	65	65	62	53	47
	65	65	65	65	57	50	45
	65	65	65	63	53	47	42
	65	65	65	58	49	44	40
	65	65	65	53	46	42	39

Todas las bisagras Ceam se fabrican en Italia y se prueban según la norma de referencia EN1935, superando pruebas de tensión, resistencia a la corrosión, capacidad de carga y durabilidad a los que son sometidas regularmente tanto internamente en nuestras instalaciones certificadas como en las instalaciones de laboratorios externos acreditados para el marcado CE, disponible en la mayoría de nuestra gama ajustable.

FOURTH HINGE

En algunos casos, el uso de una cuarta bisagra puede ser decisivo para la capacidad de carga.

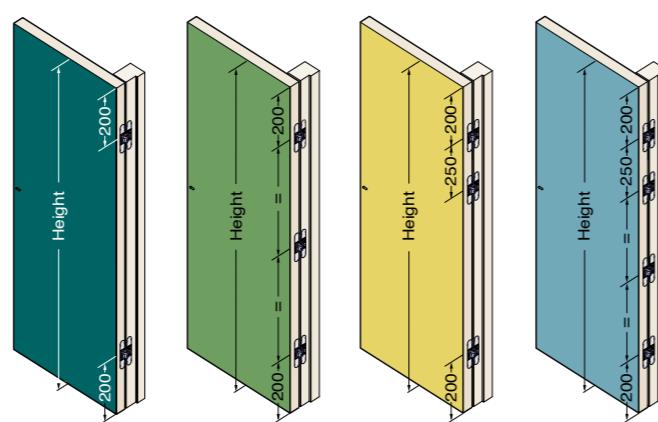

Especialmente cuando hay grandes anchuras de puerta (>1000 mm) o alturas (>2700 mm) en las que se producen fuerzas adicionales debido al efecto palanca y el centro de gravedad se desplaza, la cuarta bisagra debe aplicarse en la parte superior, a 250 mm de la primera bisagra, para influir positivamente en la capacidad de carga.

En el caso de alturas de puerta >3000 mm, recomendamos consultar con el departamento técnico. ut@ceamitalia.it

DISPOSICIÓN CORRECTA DE LAS BISAGRAS EN LA PUERTA

Al diminuir la distancia entre las dos bisagras colocadas en los doss extremos (independientemente de que haya otras bisagras entre ellas) corresponde a un aumento de la tensión del sistema.

Es aconsejable seguir atentamente las indicaciones de distancia entre ejes en el dibujo de al lado.

CIERRAPUERTAS

Ceam recomienda instalar siempre una tercera o cuarta bisagra en la parte superior de la puerta en presencia de mecanismos cierrapuertas, ya que éstos modifican las fuerzas de tracción, aumentan la carga y pueden alterar la capacidad de carga de las bisagras.

Más concretamente, según la norma europea de referencia EN1935:

- Para cierrapuertas sin freno de apertura, se sugiere considerar que la masa efectiva de la puerta sea el 20% superior de la masa real.
- Para cierrapuertas con freno de apertura (backcheck) el efecto es mucho mayor; se recomienda calcular que la masa efectiva de la puerta sea de un 75% superior que la masa real.

EJEMPLO DE CÁLCULO:

- 1- Peso real de la puerta: 70 kg.
- 2- Presencia de cierrapuertas con backcheck (+75%)
- Cálculo $70 \text{ kg} * 1,75 = 122,50 \text{ kg}$ masa a considerar para el correcto funcionamiento del sistema.
- 3- Elegir y colocar las bisagras según las indicaciones de capacidad de carga que figuran en la ficha de cada producto.
- 4- Colocar la tercera o cuarta bisagra siempre en apoyo de la bisagra superior.

En caso de dudas o usos especiales, póngase en contacto previamente con nuestro departamento técnico. ut@ceamitalia.it

TOPES DE PUERTA O PROTUBERANCIAS DE MARCO/PARED

En algunos casos, un tope de puerta, un tirador que golpea la pared o simplemente una protuberancia de la pared/marco pueden provocar un efecto palanca en las articulaciones de las bisagras que puede causar fallos en el sistema. Recomendamos la instalación de un tope de puerta que pueda limitar este efecto palanca, y recomendamos colocarlo a una distancia de aproximadamente un 75% de la anchura de la puerta en el sentido de la manilla.

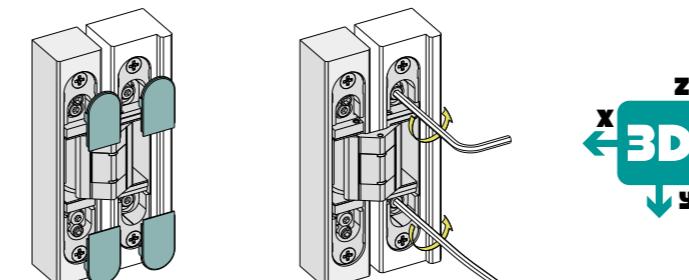

AJUSTES EN 3 DIMENSIONES

El rango de ajuste se indica en cada ficha técnica y las instrucciones de ajuste se encuentran en todas las cajas, estan disponibles online y las video-instrucciones están disponibles en el canal oficial de Ceam en YouTube.

Todos los ajustes de la puerta requieren una atención adecuada. El margen de ajuste indicado debe respetarse estrictamente.

Un ajuste excesivo suele provocar un mal funcionamiento, que puede causar fallos del sistema.

Todas las bisagras Ceam se entregan con todos los ajustes centrados en la posición neutra. Después de la instalación y después de cada ajuste todos los componentes deben apretarse firmemente pero no excesivamente para no comprometer el sistema.

- X** - 1 mm / + 1 mm
- Y** - 3 mm / + 3 mm
- Z** - 1,5 mm / + 2,5 mm

El rango de ajuste varía en función del modelo

HECHO A MEDIDA

En caso de aplicaciones especiales y a falta de soluciones entre las bisagras publicadas en este catálogo, envíenos más información en función de sus requisitos técnicos y de diseño. Ceam comprobará si hay algún producto fuera de catálogo o que pueda adaptarse a sus necesidades.

NOTAS

La información aquí facilitada debe considerarse orientativa. En la práctica, cada caso concreto es único: las variables que afectan al correcto funcionamiento de la bisagra pueden ser incluso más numerosas.

Debe prestarse atención a que la proporción de las bisagras sea suficiente para satisfacer también factores ajenos a lo que aquí se indica y que se comprueben en ensayos realizados en nuestras propias estructuras y en las de laboratorios externos acreditados. Especialmente en los edificios públicos, donde se producen cargas particulares debido a frecuencias de apertura elevadas que no siempre pueden calcularse, deben utilizarse bisagras de tamaño suficiente, aunque el peso de la puerta no lo requeriría. Para un rendimiento ideal, dependiendo del modelo de bisagra, su finalidad y el ambiente de uso, puede ser útil, aunque no obligatorio, lubricar la bisagra una vez cada 2 años, o más según la frecuencia de apertura, con un lubricante de silicona.

1080 glass

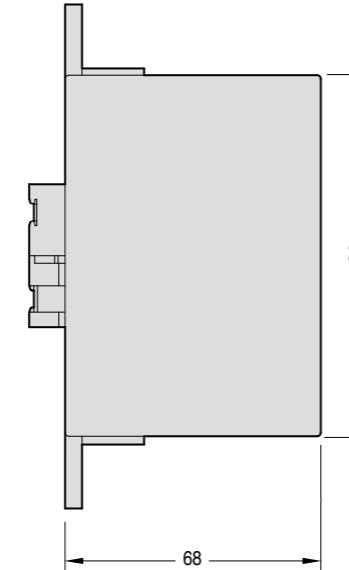

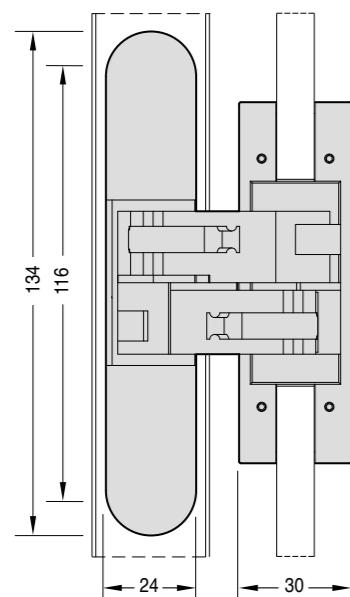

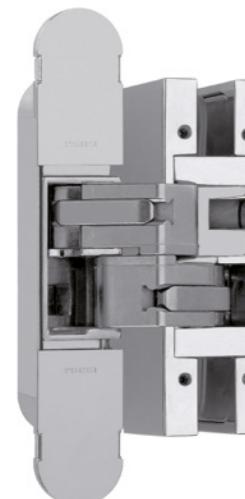

mm.134x24

Cod. CI001080 NIKVT
Cod. CI001080 ARGVT

Pack. 4

CARATTERISTICHE:

- Realizzata in zama in finitura argento o nickel
- Ideale per telai con spessore minimo di 30 mm
- Adatta a vetro da 8 e 10 mm
- Lunghezza totale 134 mm
- Profondità solo 21 mm
- Regolazione bidimensionale in altezza e profondità
- Portata fino a 60 kg

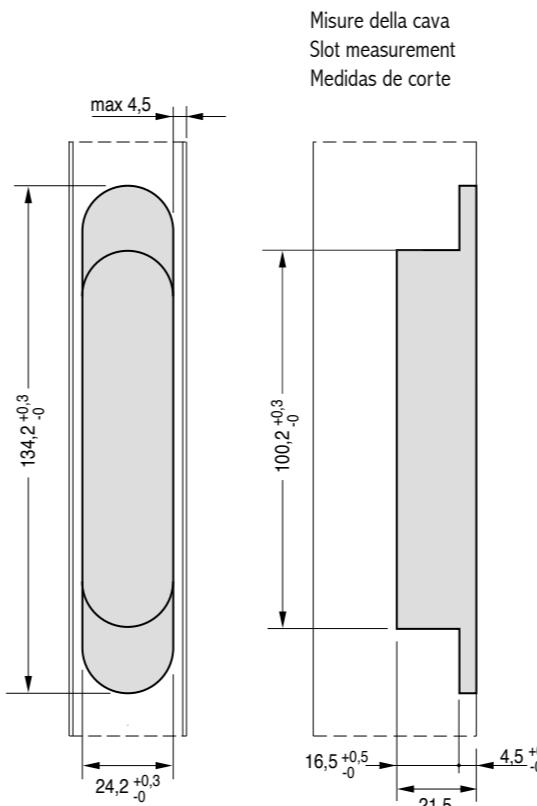

MAIN FEATURES:

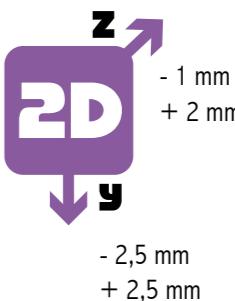

- Manufactured in zamak nickel or silver finishes
- Suitable for door jamb of 30 mm min. Thickness
- Suitable for 8 and 10 mm glasses
- Total length 134 mm
- Depth 21 mm
- 2D (vertical and depth) adjusting system
- Load capacity up to 60 kg

CARACTERÍSTICAS:

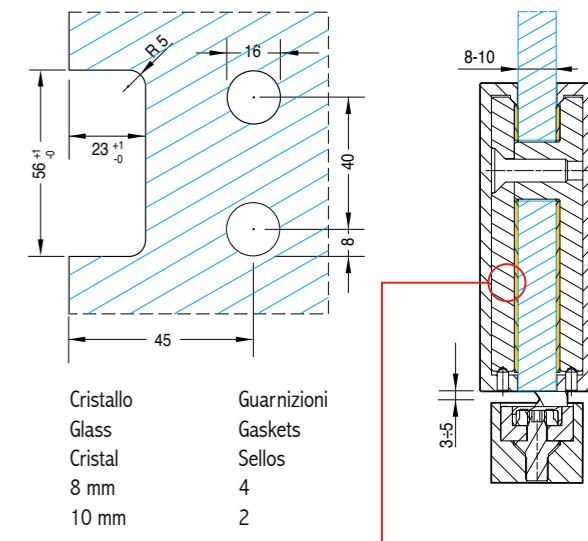

- Fabricada en zamak con acabados niquelado y silver
- Adapta para puertas con un espesor mínimo de 30 mm
- Adapta para vidrios de 8 y 10 mm
- Longitud total 134 mm
- Profundidad de solamente 21 mm
- Ajuste en 2D (vertical y profundidad)
- Capacidad de carga hasta 60 kg

Cod. CIOS1332 VNO00

CARATTERISTICHE:

- Realizzata in fibra di vetro e zama in 3 finiture
- Adatta per ante con spessore minimo di 35 mm
- Range di reversibilità elevato: centrale per ante da 35 a 45 mm di spessore
- Adatta in caso di uso di battiscopa o rivestimento fino a 15,5 mm
- Lunghezza totale 130 mm
- Profondità solo **21 mm**
- Regolazione bidimensionale
- Portata fino a 60 kg
- Easy installation e simmetria di cava
- Resistente e Ultralight: solo 240 g
- Intercambiabile con la serie 130x30x21

* Profondità di cava contenuta - Small drilling depth - Baja profundidad de corte

Cerniere invisibili regolabili per porte
Invisible adjustable hinges for doors
Bisagras invisibles ajustables para puertas

Pack. 42

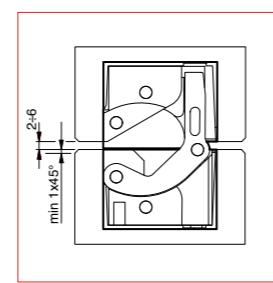

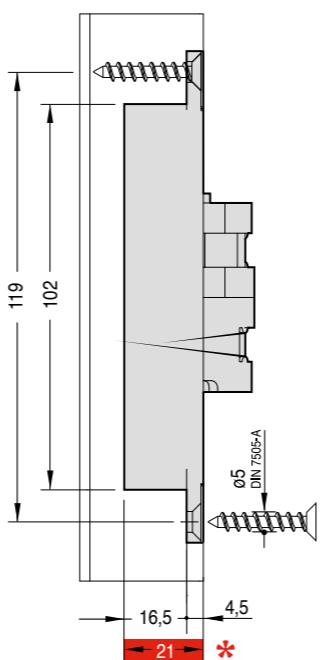

MAINTENANCEFREE

MAIN FEATURES:

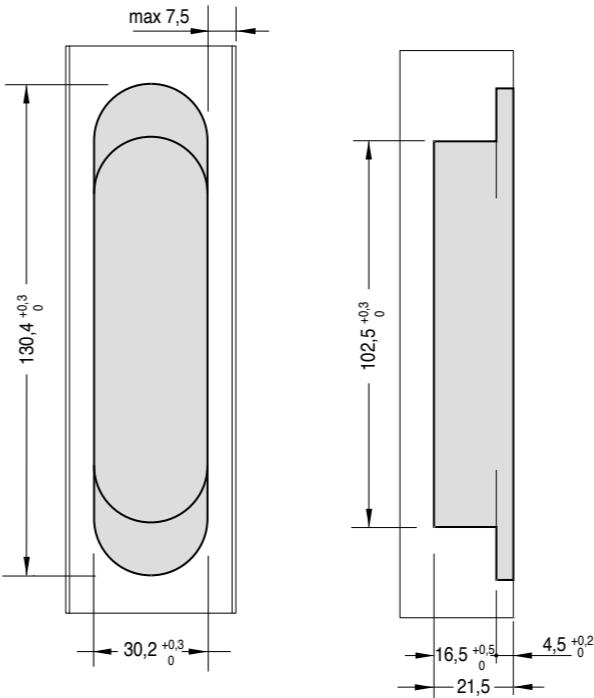

- Manufactured in fibreglass and zamak in 3 finishes
- Suitable for doors of 35 mm min. thickness
- Big reversibility range: central for doors from 35 to 45 mm thick
- Suitable in case of baseboard or claddings till 15,5 mm
- Total length 130 mm
- Depth **21 mm** only
- Bidimensional adjustment
- Load capacity up to 60 kg
- Easy installation and slot symmetry
- Tough and Ultralight: just 240 g
- Exchangeable with series 130x30x21

CARACTERÍSTICAS:

- Fabricada en fibra de vidrio y zamak en 3 acabados
- Adapta para puertas con un espesor mínimo de 35 mm
- Grande rango de reversibilidad: central para puertas desde 35 hasta 45 mm de espesor
- Adapta en casos de zócalos o revestimientos hasta 15,5 mm
- Longitud total 130 mm
- Profundidad de solamente **21 mm**
- Ajuste en 2 dimensiones
- Capacidad de carga hasta 60 kg
- Easy installation y simetría de corte
- Resistente y Ultralight: solamente 240 g
- Compatible con la serie 130x30x21

Cod. CI002015 NIKOO
Cod. CI002015 OTT00
Cod. CI002015 BR000

CARATTERISTICHE:

- Realizzata in Nylon PA6 e acciaio in 3 diverse finiture
- Adatta per ante con spessore minimo di 31 mm
- Lunghezza totale 89 mm
- Profondità 27,3 mm
- Portata fino a 50 kg
- Simmetria di cava

MAIN FEATURES:

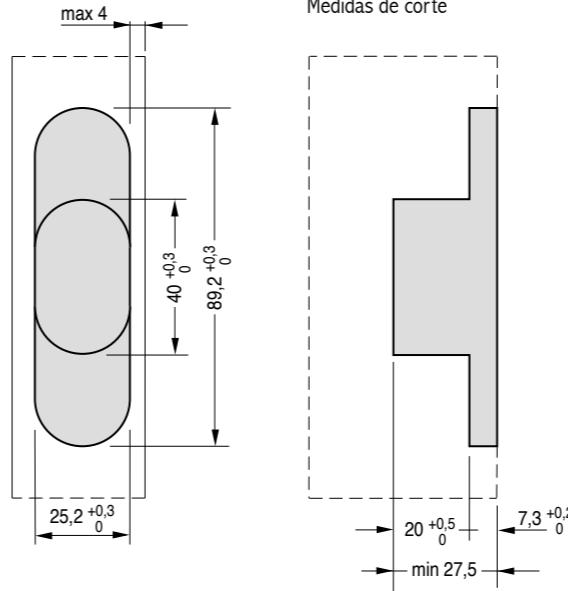

- Produced in Nylon PA6 and steel in 3 different finishes
- Suitable for doors of 31 mm min. thickness
- Total length 89 mm
- Depth 27,3 mm
- Load capacity up to 50 kg
- Slot symmetry

CARACTERÍSTICAS:

- Fabricada en Nylon PA6 y acero en 3 acabados diferentes
- Adapta para puertas con un espesor mínimo de 31 mm
- Longitud total 89 mm
- Profundidad de 27,3 mm
- Capacidad de carga hasta 50 kg
- Simetría de corte

Si possono usare legni con spessori intermedi incassando parzialmente la corona di testa.

Woods with intermediate thickness can be used embedding partly the upper protrusion/part.

Se pueden usar paneles de grosos intermedios, encajando parcialmente la corona de cabeza.

La soluzione innovativa per l'apertura verticale delle ante a libro:

- Ideale per altezze delle ante da 500 a 800 mm
- Assicura l'apertura agevolata e la chiusura ammortizzata
- Facile da montare
- Utilizzabile per ante in legno o alluminio
- Permette il montaggio della maniglia in qualsiasi posizione
- Facilita l'inserimento dei ripiani nel mobile

Innovative solution to open vertical folding wings:

- Perfect suited for wings height from 500 to 800mm
- Very smooth opening and soft closing
- Easy installation
- Suitable for wooden and aluminium wings
- It allows handle installation in every position
- Very easy shelves introduction in the furniture

La solución innovadora para la apertura vertical de las puertas a libro:

- Ideal para alturas de las puertas de 500 a 800mm
- Asegura una fácil apertura y cierre suave
- Fácil de instalar
- Se puede utilizar para puertas de madera o aluminio
- Permite el montaje de la manija en cualquier posición
- Facilita la inserción de estanterías en el mueble

1 meccanismo
1 mechanism
1 mecanismo

2 meccanismi
2 mechanism
2 mecanismos

Per altezza ante (H) si intende la singola anta (es.: altezza anta 300, altezza mobile 600).

Il peso comprende entrambe le ante e tutta la ferramenta ad esse montata. Il numero in tabella indica la posizione del foro di fissaggio del pistone (vedi disegno).

Altezza anta Height of furniture doors Altura puerta H mm	Peso anta Kg		Weight of furniture doors Kg		Peso puerta Kg						
	5	6	7	8	9	10	11	12	13	14	15
250	B	C		A							C
300	B	C	A			B		B			
350	C				B						
400	A		B				C				

By furniture-doors' height (H) we mean the single door (for example door's height 300, piece of furniture height 600).

The weight includes both furniture doors and all the furniture hardware. The number in the table shows the position of the fixing hole of the piston (see drawing).

Con "altura puerta (H)" se entiende la sola puerta (ex.altura puerta 300, altura mueble 600).

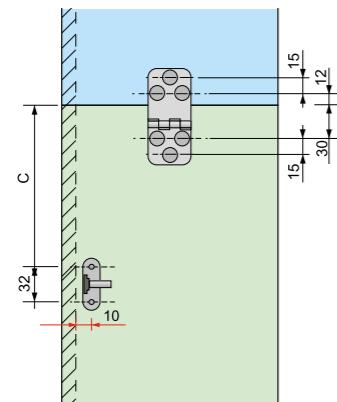

El peso comprende las dos puertas y todos los herrajes instalados.

El número en la tabla indica la posición del agujero de fijación del pistón (ver dibujo).

Componi il tuo codice:

In una tabella sono racchiuse tutte le caratteristiche costruttive: materiali, dimensioni, finiture, colori, numero di pezzi nella confezione. Abbiamo realizzato questa rappresentazione nell'ottica di realizzare l'ordine.

Ecco un esempio:

- Scelto l'articolo in funzione delle vostre necessità tecnico/estetiche
- Si scelgono le misure ottimali per la vostra applicazione
- Attacco destro o sinistro
- Colore del materiale
- Piedino

Quindi con queste esigenze, componiamo il codice:

ATO | 3063 | S | NIK | 00 |

ATO = Asta con calamita

3063 = Articolo con relative dimensioni

S = Sinistro

NIK = Nichelato

00 = Piedino normale

Create your code:

All construction characteristics are indicated in a table: materials, dimensions, finishes, colours, number of pieces in the pack. We created this representation in order to rationalise the order.

Here's an example:

- Choose the article in function your technical/aesthetical needs
- The best measurements are chosen for your application
- Right and left attachment
- Colour of the material
- Foot

With these requirements, we compose the code:

ATO | 3063 | S | NIK | 00 |

ATO = Pole with magnet

3063 = Article with related dimensions

S = Left

NIK = Nickel

00 = Normal foot

Cómo marcar el código para ordenar las subastas:

En una tabla hemos juntados todas las características de fabricación: materiales, tamaños, acabados, colores, número de piezas en el paquete.

Hemos hecho esta representación con el fin de racionalizar el pedido.

Supongamos una orden:

- Elegido el elemento de acuerdo a sus necesidades técnicas / estéticas
- Se eligen las medidas óptimas para vuestra aplicación
- Ataque derecho u izquierdo
- Color del material
- Pie

Con estos datos, componemos el código:

ATO | 3063 | S | NIK | 00 |

ATO = Varilla con imán

3063 = Artículo con su tamaño

S = Izquierda

NIK = Nickel

00 = Pie normal
