TG9 Series | Switches Sockets and Accessories
Product Information and Catalogue

norisys®

A range that redefines luxury
Switches designed for aesthetics & performance

TG9 Series is a modular product range which is designed to satisfy the requirements of electrical installations in modern buildings.

The range includes switches, sockets, fan regulators & dimmers, hospitality products, acoustic and optical signaling products, cover plates in various materials etc.

Modules such as switches, sockets etc. are made to a standard size (module) and are mounted on frames.

Front plates can be changed at any time without disturbing the wiring - in order to adapt to changes in the building interiors.

TG9 Series switches have contacts which provide very high current carrying capacity. The contact design, snap action mechanism, appropriate contact pressure, wiping action between the contacts and use of high engineering grade materials result in minimum arcing. Reduction in arcing ensures a

LED indicators used in TG9 Series switches emit a soft, reassuring glow which is mild and soothing to the eyes. Use of high quality LEDs ensures a long life without flicker. Norisys engineers have been working diligently day after day in order to ensure consistent electrical, mechanical and thermal qualities in TG9 Series

norisys®

Smooth Operation
Mechanism designed for flawless movement

The transfer of motion from the dolly to the mechanism inside has been completely restructured. The front metal dolly is shielded from the live parts by a plastic component that is solidly riveted to it, thus providing adequate insulation. This plastic part also gives the dolly the required cushioning for a smooth movement. The geometry of the spring in the contact mechanism is designed in a way so as to reduce the wear while switching even in arduous conditions.

An increase in the quantity of silver in the contacts also helps in reducing the electric arc considerably, thereby ensuring a trouble-free long life for the mechanism. Smoothness of operation imparts the luxury feel to the product. A soft click is all it takes to switch a light on.

TG9 Series

Norisys TG9 Series plates set the standard for stylish design. They are available in top quality materials: Solid Aluminum, Solid Glass, Solid Wood, Solid Marble finish. The classy design creates an exclusive flair owing to the interaction of contrasts between the severity of optical forms and surface finish.

Each piece of Solid Aluminum plate is machined out of a solid block of aluminum to give it the sharp and clean look. These plates are available in natural, black and dark bronze colours that match very well with the modules. The complete look is a solid, well engineered and a smart composition.

norisys®

TG9 Series products are designed for durability and flawless performance even in arduous conditions. The products are mounted in a way that the entire pressure of wires in the junction box is borne entirely by a sturdy bi-material frame.

The bi-material support frames in TG9 Series is the result of several man-hours of research and development. Bi-material frames are a combination of steel and engineering grade plastic.

Cover plates have different combinations of holes and windows. Holes are meant for switches and fan regulators, while the windows are meant for all other modules.

Modules are mounted on bi-material frames using a unique snap-fit mechanism. This snap-fit mechanism is highly accurate thereby ensuring that all modules fit comfortably without the need of force. Location of the modules on the bi-material frames is controlled by this mechanism and it maintains uniform gaps between the modules. It uses locks that remain free from any

Sustainable Materials Advantage
Materials chosen for functionality and sustainability

Materials chosen for TG9 series products reflect the Core values of Norisys that guide everything we do as a company and strongly influences the decisions our employees make at work. It is our long standing commitment and it exemplifies the way we operate. These values are timeless and foundational for a sustainable strategy that positions Norisys for long-term growth and strengthens our connection within local communities.

We are committed to protecting the health and safety of the people connected with us in any way - our employees, our contractors, our customers, and the people in the communities

where we operate. We search for science-enabled, sustainable solutions for our customers and always strive to manage businesses while protecting the environment and preserving the earth's natural resources — for today and for future generations.

At Norisys, we regularly engage in multiple sustainability initiatives. We are working towards minimal waste in our operations — not only inside the four walls of the plants, but also across the complete lifecycle of the

Bi-material Frames Advantage
Frames that are designed for tough performance

TG9 Series products are designed for tough performance. The products are mounted in a way that the entire pressure of wires in the junction box is borne entirely by a sturdy bi-material frame.

The bi-material support frames in TG9 Series is the result of several man-hours of research and development. The bi-material frames are made of a combination of steel and engineering grade plastic. In this design, the steel structure is embedded into plastic. The steel inside gives the bi-material frame a rigid structure while the plastic provides the anti-rust and insulation properties.

Modules are mounted using a unique snap-fit mechanism. The snap-fit mechanism is highly accurate, thereby ensuring comfortable fitment of all modules without the need for excessive force. Location of the modules on the frames is controlled by this mechanism which maintains uniform gaps between the modules. This mechanism uses interlocking that

Solid Marble Finish
Sparkle White

Solid Marble Finish
Terra Beige

Solid Marble Finish
Salt White

Solid Marble Finish
Onyx White

Solid Marble finish plates are individually machined from solid blocks so that the end product is a crisp clean-cut flat plate that bears modern aesthetics. The Sparkle White and Salt White options match very well with white stones whereas the Onyx White and Terra Beige options match very well with stones from the Beige and Brown family. Once mounted along with the TG9 Series modules, it creates a confluence of technical accuracy with a natural feel.

Norisys TG9 Series plates set the standard for stylish design. They are available in top quality materials: Solid Aluminum, Solid Glass, Solid Wood, Solid Marble finish. The classy design creates an exclusive flair owing to the interaction of contrasts between the severity of optical forms and surface finish.

Each piece of Solid Marble Finish Plate is machined out of a solid block of composite to give it the sharp and clean look. These plates are available in Sparkle White, Terra Beige, Salt White and Onyx White colours that match very well with modules. The final composition after mounting looks well engineered and smart.

Engineering Plastics
Materials chosen for superior finish and endurance
Charcoal Black
Quartz Gray

Silver Dust
Cocoa Brown

These plates are made of engineering plastics. They are an example of our longevity approach, where we endeavor to extend the lifetime of the product substantially beyond industry standards.

The plates are designed with a modular approach, making it easy to maintain and service. For example, customers can replace the switches or sockets and customize the combinations with new materials and / or colours as per their own

Electrical safety advantage
Unique ring-shaped springs in sockets

Norisys engineers developed a unique ring-shaped spring which solves the frequently occurring problem of burnouts in power sockets. Norisys sockets feature this ring-shaped spring which maintains a uniform pressure on the brass contact tubes. This pressure clamps the plug pins tightly leading to a spark-free contact, thus eliminating overheating and consequential burnouts. Norisys sockets are designed for extreme endurance. Materials are chosen to withstand arduous conditions. Local wiring practices are carefully studied before designing any new product.

Thermoset material advantage
Use of material that does not melt on heating

Use of engineering grade thermoset material in TG9 Series products makes the range extremely strong and sturdy with flame proof qualities. The engineering grade thermoset material used in the products has excellent electrical insulation properties and does not melt upon heating. This ensures that the products are capable of handling higher operating temperatures. This engineering grade thermoset material is conventionally used in industrial applications where a high

Products like Speakers for Audio Music, Night Lights with Dimming Option, Step Marker Lamps, Prismatic Overdoor Bulkhead Indicators etc. when mounted with modular switches provide the necessary convenience in modern buildings apart from adding to the style quotient. These installations not only look good, but are also ideally convenient to operate. These products are all mounted on bi-material support frames in TG9 Series. The bi-material frames are made of a combination of steel and engineering grade plastic. In this design, a steel structure is embedded into the plastic to

TG9 Series

TG9 Series installations do not only look good, they are also extremely convenient to operate. This quality is especially required in hotels and hospitals where one seeks quiet and wellbeing. In such environments, it is important to have fittings that stand for good feeling. Products like Shaver Sockets, Key Card Switches, Call bell systems with register, Buzzers, Speakers for Music circuits, Step Marker Night Lights, Do Not Disturb and Clean My Room dedicated switches, Bell Switch with DND & Clean My Room connections provide the necessary convenience for guests in hotels. Plates merge with the building interiors very well, thereby creating a homogeneous look. Inner bi-material frames give adequate support to the plates, thereby keeping all the modules securely

TG9 Series marks the evolution of Norisys' research as it once again focuses on engineering design, especially its environmental qualities & pivots on the concept of variability and sustainability, performance and simplicity of use. It is a new way of creating environments, made possible by the types of products that have been developed, namely by using advanced materials and engineering. The result is an installation system that blends seamlessly with the building.

A professional of electrical switchgear, Norisys today constructs innovative switchgear systems at the highest level and has established and by many years of experience and high quality workmanship. TG9 Series is the best example of the same.

TG9 Series exploded view

Solid, heavy products with fine precision engineering resulting in trouble-free operation.

Cover plate can be snap fit onto the frames after final painting of walls.

Strong and precise locks for sturdy mounting and easy removal.

Cover plates available in various materials and finish like Solid Glass, Solid Aluminum, Solid Wood and Solid Marble Finish.

Cover plates have different combinations of holes and windows. Holes are meant for switches and fan regulators, while the windows are meant for all other modules.

TG9 Series switches are available in Metal Chrome Glossy, Metal Chrome Matt, Metal Black Glossy, Metal Mellow Gold and Plastic Quartz Gray versions.

norisys®

Thermoset material which can be seen in red colour is used inside to house the live metal parts. This material is extremely high heat resistant and does not melt on heating.

Engineering grade polycarbonate with high impact resistance and ultraviolet light resistance .
Bi-material frames that have high quality steel embeded inside thermoplastic. A result of advanced engineering, this combination leads to extra stiffness and tight tolerances for mounting of modules.
